Celebrating 47 Years!

Winter 2027

Specializing in unusual trees, shrubs, and vines that produce edible nuts or fruits

Burnt Ridge Nursery & Orchards is a family owned farm, in business since 1980. Our 20 acre farm is located in the foothills of the Cascade mountains with a distant view of Mount St. Helens. Our mail order nursery specializes in disease resistant bushes, trees, and vines that provide edible fruits or nuts. We also have a large selection of N.W. native plants. The varieties we carry have done well in our orchards. If you have any questions, please feel free to call or write. We can help you make appropriate choices for your growing area.

Online ordering with a shopping cart is available. We have a beautiful website with color photos and lots of information that will help make plant selection and care easier. Remember that this catalog is only a guide and that the website will have the most up-to-date information on pricing and availability.

FRUIT TREES

We offer fruit trees on a variety of rootstocks.
If we're out of a particular rootstock or size,
we will substitute the closest option available
unless you request <u>no substitutions</u>.

Apple Trees

Malus domestica

M27 is our most dwarfing rootstock, producing a 5' tree. M9, and Bud9 dwarf are more typically 6-10' trees. These dwarfs are very precocious and require staking or trellising. M26 dwarfing rootstock gives an 8-12' tree and can be freestanding if fruit is thinned when young; M7 and M106 semi-dwarf gives a 10-17' tree. M111 is a slighter larger semi-dwarf. Bud118, an extra hardy Russian rootstock, gives large semi-dwarf tree, similar to M111. Antonovka is a standard rootstock for a hardy, full sized tree, 20+ feet.

See our website for Apple Pollination Chart!

Listed below in ripening order

Small $26.00
Dwarf, Semi-dwarf, & Standard $29.00;
Large $34.50
unless otherwise noted

YELLOW TRANSPARENT - Very hardy, of Latvian origin, before 1870. Earliest apple to ripen. Excellent sauce apple. Fragrant and tender, but short window for fresh eating. Not a good keeper. Excellent disease resistance. Early bloomer.
Zone 2-8
Semi-dwarf on M106

LODI - Very early ripening with tart, crisp, yellow fruit. Used for pies and sauces. Resembles Transparent but is larger, less mealy, and keeps better. Scab resistant. **Zone 2-9**
Large Semi-dwarf on M106

WILLIAMS PRIDE - Very early red dessert apple, crisp, juicy, flavorful. Scab immune, resistant to fire blight, cedar apple rust, and powdery mildew. **Zone 4-9**
Dwarf on Bud9; Semi-dwarf on M7; Standard

AKERO - This Scandinavian dessert apple is crisp and juicy with a raspberry tartness and sweet aftertaste. A really good keeper for a summer ripening. Named after a town in Sweden where it originated over 300 years ago. Red over yellow skin, white flesh. **Zone 3-8**
Standard

GRAVENSTEIN - Very flavorful, crisp, and juicy for fresh eating, sauce, and pies. Vigorous tree. Pollen sterile. Pollinators: Spartan, Williams Pride, Akane, Prima, Liberty. Somewhat fireblight and scab resistant. **Zone 2-9**
Mini-dwarf on M27; Semi-dwarf on M106; Standard

GOODLAND - Canadian variety with round, red, fragrant fruits known for flavor, crispness and lots of juice. Here in western Washington, they ripen in late August. Hardy to **Zone 2.**
Standard

AKANE - Medium sized crisp, red apple. Fine for fresh eating and suitable for drying. Early and reliable bearer. Resistant to mildew, scab, and fire blight. Self-fertile. **Zone 5-9**
Semi-dwarf on Bud 9

NORLAND - Red striped fruit of good quality for fresh eating or cooking. A natural dwarf. Ripens early, keeps 4 months in cold storage. Canadian variety, hardy to -40 F. **Zone 2-8**
Standard; Semi-dwarf on Bud 9

WYNOOCHE EARLY - The best quality early ripening, disease resistant apple. Large, firm, juicy fruits with a great flavor and crisp texture. Suitable for fresh eating and cooking. Can be stored until the end of December in refrigeration. **Zone 4-9**
Small Semi-dwarf on M111; Semi-dwarf on M7; Semi-dwarf on Bud 9; Standard

SANSA - Early ripening, luscious dessert apple with good resistance to fireblight and scab. Sweet, juicy and crisp red fruits keep well for an early ripener. Early midseason bloom. Cross between Gala and Akane. **Zone 4-9**
Semi-dwarf on M111; Large Semi-dwarf on M106

HONEYCRISP - Best flavored, hardy apple. Large, crisp, juicy, and sweet yellow-red fruit. Great keeper, moderate disease resistance. From MN. **Zone 3-8**
Small Dwarf on M26; Semi-dwarf on M7; Standard

ROYAL RED HONEYCRISP ™ - Same crisp sweet flavor as the original Honeycrisp, but with brighter color and better keeping quality. **Zone 3-8**
Large Dwarf on G214; Large Semi Dwarf on G890 $35.50

CINNAMON SPICE - Uniquely aromatic. Small- to medium-sized sweet red apples with wonderfully fragrant cinnamon flavor which lingers after eating. Cinnamon Spice apple ripens late October. Grows particularly well in the Southern US. **Zone 5-10**
Large Semi-dwarf on M111

SWEET 16 - Medium-large red striped fruit is firm, crisp, juicy and aromatic. Productive, healthy, precocious, and a good keeper. Minnesota selection of a cross between Frostbite and Northern spy. Excellent fresh eating, also good in pies, sauce, and sweet cider. Resistant to scab and fireblight. **Zone 3-8**
Dwarf on Bud9; Small Standard; Standard

TRIUMPH ™ - Well named for its beautiful bright red fruits. Nicely balanced flavor and texture. University of Minnesota cross between Honeycrisp and Liberty, resistant to two strains of apple scab. Blooms midseason, ripens in early fall. **Zone 4**
Large Mini-dwarf on M9, G11 $35.50

LIBERTY - Very resistant to scab, mildew, cedar apple rust and fireblight. Attractive, medium red fruit, crisp sweet/tart flavor and exceptionally nutritious. Midseason ripening, very productive, annual bearing, good keeper. Self-fertile. **Zone 4-9**
Mini Dwarf on M27; Dwarf on M26; Semi-dwarf on M7; Large Semi-dwarf on M111, Large Semi-dwarf on M106

JONAGOLD - One of the most highly acclaimed apples for flavor. A cross between Jonathan and Golden Delicious, and considered better than either parent. Large, red-striped fruits are crisp and juicy, great fresh or for pies. Excels in Western Washington State and other cool summer locations, however it is not particularly disease resistant. Good annual producer. Pollen sterile. Mid-season bloom, mid-fall ripening on a vigorous tree. **Zone 4-9**
Small Semi-dwarf on M111

FREEDOM - Medium to large red apples that are juicy, crisp and very good for fresh eating, baking and cider. Mid-season ripening. Resistant to scab, mildew and fireblight. **Zone 4-9**
Small Dwarf on Bud 9; Semi-dwarf on B118; Large Semi-dwarf on M106

SPARTAN - McIntosh x Newton. Resistant to scab, mildew and fireblight. Dark red dessert quality, also good for cooking. High antioxidant level. Excellent keeper. Self-fertile. **Zone 3-9**
Mini-dwarf on M27; Dwarf on M26, Bud 9; Standard

COSMIC CRISP® - A patented variety newly released from WSU and only available to growers in Washington State. A cross between Honeycrisp and Enterprise. A large, crisp and very flavorful juicy red apple that doesn't turn brown when cut open, known for high yield, attractiveness, disease resistance and long keeping quality. **Zone 6-9**
ONLY SHIPPED TO WASHINGTON STATE
Large Dwarf on G11, G935 $40.50; Large Semi-dwarf on M106 $40.50

KING - Red striped, sweet and crisp dessert apple ripens in October. Pollen sterile. Pollinated by Northern Spy, Sweet 16, Gold Rush and others. **Zone 5-9**
Small Dwarf on Bud 9; Large Dwarf on M26; Semi-dwarf on M106; Standard

LUCY GEM - Yellow skinned apple with a vibrant red flesh. Lucy Gem apple is crisp and juicy with a delicious, fruity flavor. **Zone 4-8**
Semi-dwarf on M106, Large Standard

PINK PEARL - Reddish pink flowers followed by medium to large fruits that are quite fragrant with a bright pink flesh. Good dessert apple, commonly used to color cider, sauce and in pies. Blooms and ripens fairly early. **Zone 4-9**
Dwarf on M26 $35.50, Large Dwarf on M26 $40.50

ASHMEAD'S KERNAL - One of the best tasting of all apples. Crisp, tart and juicy when first harvested, they improve and taste sweeter a few weeks after harvest and will keep for 4 months. Medium sized fruits with yellow-green skin covered in brown russeting. Flesh is yellow and fragrant. Used for dessert and sauce, makes a fine cider. some resistance to scab and mildew. English variety from the early 1700's. Pollen sterile. **Zone 3-9**
Dwarf on M26, Large Semi-dwarf on M106; Standard

BRAMLEY'S - Large, firm, juicy, tart fruits are often picked green for pies and sauces. Allowed to fully ripen, fruit is yellow/red and suitable for fresh eating. Also used in cider blends. High vitamin C content and especially high in beneficial antioxidants. Vigorous and heavy bearing trees. Scab and mildew resistant. Pollen sterile. **Zone 4-9**
Small Dwarf on Bud9, M26

WOLF RIVER - Old Wisconsin variety with gigantic fruit. Good pie apple, only requiring one or two per pie. Resistant to scab, mildew, and cedar rust. **Zone 2-9**
Large Semi-dwarf on M111

COX ORANGE PIPPIN - England's favorite apple. Excellent flavor, juicy, sweet and crisp. Medium-sized round fruits, yellow/orange skin with reddish brown streaks. Vigorous variety. Mid-season ripening. Self-fruitful. **Zone 4-9**
Large Dwarf on M26; Large Semi-dwarf on M106

BENI SHOGUN FUJI - Early ripening strain of Fuji, a very late apple that keeps well. Sweet, flavorful, and crisp. **Zone 5-9**
Dwarf on M26

ENTERPRISE - Large, red, crisp, and flavorful. Improves with storage. Harvests late October and will keep up to 6 months. Resistant to scab, mildew, fireblight and cedar apple rust. Pollinates with all except King and Gravenstein. Patented. **Zone 4-9**
Large Dwarf on M26; Semi-dwarf on M106 $35.50

GOLD RUSH - Ripens early November. Best keeping, improves in quality after 2 months in storage, and keeps up to 7 months. Scab immune, resistant to mildew and fireblight. Yellow, crisp, medium sized apple, excellent flavor. Patented. **Zone 4-9**
Small Dwarf on Bud 9 $27.00; Semi-dwarf on M7 $30.00

YARLINGTON MILL CIDER APPLE - Medium sized yellow fruit. Dependably productive with a bittersweet juice of fine flavor and aroma. Used to make a single variety cider or blended with other, sharper types. Ripens in October. **Zone 4-9**
Small Dwarf on M26 $29.50

NORTHERN SPY - Large, juicy all purpose variety from N.Y. prior to 1800. Late bloomer, great keeper. **Zone 3-9**
Dwarf on M26; Semi-dwarf on M106; Standard

SPYGOLD - Cross between red Northern Spy and Golden Delicious, with a flavor superior to either parent. Crisp, sweet fruits that are good keepers. A vigorous, productive tree. Blooms late, pollen sterile. Fireblight resistant. **Zone 3-10**
Dwarf on Bud9; Small Standard; Standard

EARLY PINK LADY® - Pink Lady ®, a patented apple, originally from Australia has become very popular due to its crunchy texture sweet/tart flavor, extraordinary keeping quality and ability to resist browning when cut. Early Pink Lady ® is an early ripening bud sport of Pink Lady, ripening nearly a month earlier. **Zone 4-9**
Small Semi-dwarf on M111 $27.00

HUDSON'S GOLDEN GEM - Big golden brown russeted fruit. Sweet, crisp, and juicy fruit with a terrific flavor. Late ripening and a good keeper. Midseason bloom period. Any unharvested fruit will hang on the tree for wildlife over winter. Resistant to fireblight, scab and mildew. **Zone 3-9**
Small Semi-dwarf on M111

GOLDEN RUSSET - Medium sized golden brown fruit with excellent sweet flavor and yellow flesh. For dessert and cider blends. A very old American variety. Scab resistant. **Zone 4-9**
Small Dwarf on M26

MONTY'S SURPRISE ™ - A Burnt Ridge exclusive introduction from New Zealand. Very large, attractive fruits are juicy and flavorful with a citrus-like aftertaste. The flesh has extraordinary amounts of phytonutrients and the skin has the highest levels of beneficial flavonoids of any apple. These apples have been found to suppress the growth of colon cancer cells better than any other apple variety.
Dwarf on Bud9 $30.00

WINECRISP - Sweet red fruits of exceptional flavor, juicy and crisp. Mid-fall ripening, and high yielding. The fruits hang well on the tree and keep very well. Scab immune and resistant to other major apple diseases. Mid to late bloom time in spring. New release from PRI, the culmination of 60+ year old breeding program for desirable, disease resistant varieties. Jonathan, Newton, and Cox Orange Pippin are among its parents. Patented. **Zone 4-8**
Semi-dwarf on M7 $30.00; Standard $30.00

ARKANSAS BLACK - Crisp, firm and juicy with a great sweet taste, for dessert or cooking. Its pleasant aroma is an excellent addition to a cider blend. Dark purplish red skin with yellow flesh. A late ripener and great keeper. Resistant to cedar apple rust and codling moth. Pollen sterile. **Zone 5-10**
Large Semi-dwarf on M106

GRANNY SMITH - Very late, yellow-green, sweet -tart apple. Commercially, it is harvested before it's fully ripe - when it is still green, hard, and tart. Very highly nutritious. **Zone 5-9**
Large Dwarf on G214; Large Semi-dwarf on M106

Eating apples also used for cider: *Newtown Pippin, Pink Pearl, Arkansas Black, Bramley's, Baldwin, Gravenstein, Golden Russet, Ashmead's Kernal*

Crabapple Trees

Malus

DOLGO *Malus pumila* - Large, abundant white blossoms followed by bright red fruits that make flavorful red jelly. Resistant to scab, mildew, rust and fireblight. Highly ornamental. Early ripening. Old Russian variety. Self fertile. **Zone 2-8**
2yr $6.50

PACIFIC *Malus fusca* - Able to grow in very wet sites, hence the alternate name "swamp crabapple." Suitable as a rootstock for apples on sites otherwise too wet. Widely adapted west coast native, from California to Alaska. Very tiny, tart fruits. **Zone 5-8**
2yr 18-36" $7.00; 10+ $6.50ea

Cherry Trees

Prunus

Dwarf on G5, Semi-dwarf, & Standard $36.00
Large Dwarf on G5 & Semi-dwarf $41.00
unless otherwise noted

PIE CHERRIES

Prunus cerasus

Listed below in ripening order

Pie cherries are primarily used for baking, canning, juice, or jam. More tart than sweet cherries, some are nevertheless sweet enough to eat fresh.

CARMINE JEWEL *Prunus fruticosa x cerasus* Vivid red cherry between sweet and tart. Early ripening with a very small pit. Easy to grow, resistant to diseases and pests. Super hardy from Saskatchewan. Naturally dwarfing, to about 6'x6' and self-rooted. Self-pollinating.
Zone 2-7
Dwarf on own roots

EVANS BALI - Dark red, 1-inch Morello type cherries. Used as a pie cherry, yet sweet enough to eat fresh. Self fertile and uniquely hardy, from Alberta. Productive on a naturally dwarfing tree.
Zone 3-8
Dwarf

CRIMSON PASSION - Larger-fruited than most, suitable for pies and juice, yet sweet enough to eat fresh. Self-fruitful. Grown on its own roots, so it's easy to maintain in a bush form. Sensitive to too much water in root zone. **Zone 3-8**
Dwarf on own roots; Large Dwarf on own roots

MONTMORENCY - Very productive. Originated in Montmorency, France about 400 years ago, and still considered one of the best. Self-fertile. **Zone 4-9**
Large Semi-dwarf

NORTH STAR - Among the hardiest of all cherries. From Minnesota. A naturally dwarfing variety. Productive and self-fruitful. Resistant to cracking and brown rot. **Zone 4-8**
Large Dwarf on G1; Large Semi-dwarf

FE FRANCIS ELIZABETH - This tart cherry is a little sweeter than most pie cherries, very flavorful with bright red skins and pink flesh. The Francis Elisabeth is a natural dwarf 8-12ft, widely adapted to dry summer regions, mid to late summer ripening. Hardy to -45°F. Excellent sweet flavor with tartness. Self-fertile. **Zone 3-8**
Small Self-rooted $25.00

SWEET CHERRIES

Prunus avium

Sweet cherries on Gisela-5 dwarfing rootstock can be maintained at 8 to 12'. This rootstock induces early fruiting and productivity, is disease resistant, tolerates a wide range of soil types, and is hardy.

Listed below in ripening order

Dwarf on Gisela-5 (G5) $36.00
Large Dwarf $41.00
Unless otherwise noted

BLACK TARTARIAN - Purplish-black heart shaped fruits ripen early and are sweet, crisp and juicy with a fine flavor and a small pit. Introduced to the west into England from Circassia Russia in 1794. A Black Tartarian Cherry planted in 1860 in Eugene, OR still bears and is among the oldest known grafted cherry trees. **Zone 5-7**
Large Semi-Dwarf $39.75

EARLY ROBIN - Looks and taste like Rainier, but earlier ripening by 11 days and much more resistant to cracking in rainy weather.
Large Dwarf on G6

BING - Historically, the main commercial dark sweet cherry. Considered the standard for excellence in flavor since the 1850s. Dark, heart shaped fruit of excellent flavor and juiciness. Pollinates with any of our cherries except Kristin. **Zone 5-8**
Dwarf

BLACK PEARL® - Ripens early. Produces large, round dark fruit that is exceptionally sweet, flavorful and crisp. Firm, resistant to cracking and keeps well. Shows good resistance to bacterial canker. Pollinates with early blooming sweet cherries. Cornell University New York introduction. **Zone 5-8**
Large Semi-dwarf on K5 $42.25

RAINIER - Large, firm fruit. Blush yellow skin is less attractive to birds, white juicy flesh, cracking resistant, particularly hardy yet fairly low chill. Pollinated by all but Kristin. **Zone 5-9**
Large Dwarf; Large Dwarf on G6, G12 $41.25

SAM - Large sweet black cherry resembling Bing in flavor, but more resistant to bacterial canker and fruit cracking than Bing. Less susceptible to spring frost than others. **Zone 5-9**
Dwarf

KRISTIN - Large dark fruits are cracking resistant, sweet, juicy, aromatic and productive. Hardiest dark sweet cherry. Pollinated by all varieties but Bing. **Zone 4-8**
Large Dwarf

GLACIER - Large, sweet, dark red fruits on a self-pollinating tree. Fruit size is a little larger than Bing or Lapins, and has very good cracking resistance. A WSU selection, proven to be especially well adapted to cooler maritime regions. **Zone 5-9**
Dwarf

GOLD - Bright yellow skin and flesh, cracking resistant, productive, and of midsized fruit with a uniquely good tangy flavor. Yellow fruit is generally less attractive to birds and this is among the hardiest of all sweet cherries, surviving -30F. **Zone 4-8**
Large Semi-dwarf

WHITE GOLD - A late blooming, self fertile sweet cherry with pale yellow skin with red blush. Firm yellow flesh. Resistant to bacterial canker and cracking. Cross between "Stella" and "Emperor Francis" made at Cornell, NY. **Zone 4-8**
Large Semi-Dwarf

VAN - Large dark fruit, similar to Bing, with some resistance to cracking. An early and reliable bearer. Pollinated by all varieties except Bing. **Zone 5-9**

VANDALAY - A self-fertile sweet cherry with large black delicious fruits that are resistant to cracking under wet conditions. Resistant to bacterial canker. Widely adapted selection from Eastern Canada. Midseason ripening. **Zone 5-9**
Large Dwarf

LAPINS - Canadian variety of sweet cherry. A cross of Van and Stella. Large black, Bing-like fruit has a delicious flavor and is crack resistant. Late ripening, self-fertile. **Zone 5-9**
Large Dwarf; Large Standard on Mazzard

Nectarine Trees

Prunus persica

Dwarf $36.00
Large Dwarf $41.00
Semi-dwarf $32.75
Large Semi-dwarf $37.75

Semi-dwarf on Lovell unless otherwise noted

Listed below in ripening order

HARKO -Very hardy and reliable bearing of red skinned fruit with yellow flesh. Freestone with very good quality. Resistant to bacterial spot and brown rot. Self-fruitful. **Zone 5-8**
Dwarf ; Semi Dwarf on Lovell

MERICREST - Among the hardiest of nectarines, developed by E. Meader of New Hampshire. Red skin with sweet yellow flesh; freestone. Blooms late, good resistance to leaf spot and brown rot. Self-fruitful. Hardy to **Zone 5**

HARDY RED - Red-skinned, freestone, yellow fleshed. Very flavorful with good texture. Self-fruitful. Resistant to bacterial leaf spot and brown rot. Vigorous and very productive, needs thinning to size up. Canadian origin. Hardy into warmer **Zone 4** locations.
Dwarf on St. Julian

Peach Trees

Prunus persica

One of the great experiences of summer is biting into a freshly harvested juicy, luscious peach.

For those in Western Washington and Oregon, we recommend varieties that are **resistant to peach leaf curl disease,** which is important due to our cold and rainy spring weather.

Dwarf $36.00 • Large Dwarf $41.00
Semi-dwarf $32.75,
Large Semi-dwarf $37.75
Standard $32.75

Semi-dwarf unless otherwise noted

Listed below in ripening order

SATURN (DONUT) - Very distinct looking round flattened fruit with sweet, juicy white flesh. Yellow skin blushed red. Highly resistant to bacterial canker, but susceptible to peach leaf curl. A low-chill, early blooming variety best suited to areas not prone to late spring frosts. Self-fruitful. **Zone 5-8**

RED HAVEN - Early ripening, productive peach. Most widely grown variety in the U.S. Great quality. For fresh eating and canning. Yellow flesh and freestone. Not resistant to peach leaf curl. Self-fruitful. **Zone 5-9**

SALISH SUMMER (Q-1-8) - White-fleshed peach with a sweet and sprightly flavor for fresh eating, but a bit too soft for canning. Semi freestone. Excellent for cool summer growers. **Leaf curl resistant** and self-fruitful. **Zone 6-9**

RELIANCE - One of the hardiest varieties, from N.H. Late blooming, to help escape spring frosts. Showy blossoms. Yellow fruit with red blush, sweet flesh. Good fresh, frozen, or canned. Freestone, small pit. Summer ripening. Self-fruitful. **Zone 4-9**

SUNCREST - Large, round, freestone fruit with bright red blush over yellow background. Great flavor, hardy, vigorous, and self fertile. The variety extolled in the book *Epitaph for a Peach* by David Masumoto, for its exceptional quality. **Zone 5-9**

CHARLOTTE - Large, reddish/orange fruit is sweet, delicious and semi-freestone. Highly resistant to peach leaf curl disease and bacterial canker. Self-fruitful. **Zone 5-10**

FROST - Yellow-fleshed, freestone, and the **most leaf curl resistant variety.** Large to medium sized fruits, heavy bearing, needs thinning. Ripens mid-August. Self-fertile. **Zone 6-9**
Standard

VETERAN - Yellow fleshed, firm, free-stoned variety. Great fresh flavor, suited to canning and freezing. Unusually hardy, Canadian variety. Later blooming than most other varieties, with late August ripening. Self-fertile. **Zone 5-8**

POLLY WHITE - This Iowa peach is known for its exceptional hardiness and very good flavor. A white fleshed freestone with white skin, blushed red. Small to medium sized fruit is juicy and aromatic, with midseason ripening. Self-fruitful. **Zone 5-9**

MUIR - Discovered on John Muir's property in CA around 1880. **Resists peach leaf curl.** Large freestone with good flavor. Greenish-yellow skin, good all purpose peach. Self-fruitful. **Zone 6-9**
Dwarf on Citation

CONTENDER - Best yellow-fleshed peach for cold regions. Late bloom helps resist spring frost. Fruit is large, yields well, and is blush red. Flesh is sweet, firm, and resists browning. Midsummer ripening. Self-fruitful. **Zone 4-8**

INDIAN BLOOD - Very flavorful, highly productive of large red skinned fruit with a red flesh. Blooms and ripens late. Clingstone variety, very popular for canning. Self-fruitful. **Zone 5-9**
Standard

INDIAN FREE - Large, red skinned freestone fruits. Fragrant and tart until fully ripe. Taste test winner against 70+ varieties. **Peach leaf curl resistant.** Very late ripening. Requires cross pollination with another peach or nectarine (any except Saturn). **Zone 6-9**
Standard

Apricot Trees

Prunus armeniaca

Dwarf $36.00 • Large Dwarf $41.00
Semi-dwarf $32.75
Large Semi-dwarf $37.75
Standard $32.75 • Large Standard $37.75

Semi-dwarf unless otherwise noted

Listed below in ripening order

HARCOT - Very flavorful and sweet, with juicy, good sized fruit, ripens in midsummer. Disease resistance to perennial canker and brown rot. A hardy, late blooming variety selected in Canada. Self-fertile. **Zone 4-9**

CHINESE (MORMON) - Very productive of small to medium fruits that are firm, sweet and juicy. Inside the shell, the kernel has a sweet, edible almond-like pit. Blooms later that most apricots, and ripens mid-summer. Quick to bear with good frost resistance. Self-fruitful, though cross pollination may increase yield. Very hardy. **Zone 4-8**
Standard

HARGLOW - A late blooming, sweet, firm and flavorful orange fruit with a reddish tinge. Compact and productive tree with good resistance to brown rot, canker and bacterial spot. Canadian variety. Self-fertile. **Zone 5-9**

SCOUT *Prunus mandshurica* **-** Canadian variety, quick to bear, later blooming and ripening than most apricots with freestone, golden sweet fruits in midsummer. Pink flowers. Self-fruitful, though cross pollination may increase yield. Disease resistant. Established trees hardy to **Zone 3**

MONTROSE - Discovered at 6,000' elevation near Montrose, CO. Late blooming, hardy, disease resistant, self-fruitful tree. Produces yellow, sweet, flavorful, egg sized apricots that are semi freestone. Inside the pit the edible, almond-like kernel is sweet. Deserves wide testing in northern areas where it is likely to be best adapted. Late summer ripening due to late bloom. **Zone 5-9**
Dwarf on Citation; Standard

PUGET GOLD - Beautiful blossoms in March, ripe fruit in August. Fruit has good size and flavor. Plant in a sunny location with well-drained soil. Self-fertile. **Zone 5-9**

HUNZA - White fleshed fruit. From the alpine regions of Pakistan; best suited to cold, dry regions. Edible almond like kernel, roasted before eating or expressing into oil. Self-fertile. **Zone 4-7**
Dwarf on Citation

Feijoa (Pineapple Guava)

Feijoa sellowiana

Evergreen shrub or small tree with remarkable showy, pink edible flowers.

Plum-sized, delicious fruits are not related to pineapple or guava, but taste like both.

Grafted Gallon Grown $46.00
unless otherwise noted

EARLIHART - For cool summer regions, this is by far the earliest ripening variety, with good quality fruit. Selected in Oregon from seed supplied by Roy Hart, a New Zealand breeder of Feijoas.
Grafted Gallon Grown $45.00

KAITERI ™ - Very high yielding variety with sweet and flavorful fruit. Exceptionally large fruit with a thin edible skin. Pollinates with Kakariki. Patented.

KAKARIKI ™ - Very early ripening. Large, delicious fruit with a thin edible skin. High yielding if cross pollinated with Kaiteri. Patented.

TAKAKA ™ - Very productive of large, sweet fruits with a thin edible skin. Especially early ripening and **self-pollinating.**

Jujube Trees

Ziziphus jujuba

Sweet, reddish-brown fruit is crunchy like an apple when fresh, and tastes like dates when dried. Small, thorny glossy-leaved tree, tolerant of extreme heat, drought, and winter temperatures to -10°F. Leafs out in late spring, blooms early summer. Also known as "Chinese date." Self-pollinating, though cross-pollination can increase yield. **Zone 6-9**

BLACK SEA - Medium sized, long pointed fruits are especially sweet. Reddish brown fruit turns brown when fully ripe.
Grafted Gallon Grown $42.00

CHICO (G17-62) - Round, somewhat flattened fruit with a terrific sweet taste. Thorny. Needs a long, hot, growing season.
Large Grafted $52.00

LI - Good dried or especially good fresh. Can be eaten early when yellow/green. Small, glossy leaved tree. Precocious and self-fertile. Thorny.
Grafted Gallon Grown $42.00

QIYUE XIAN - Another recent introduction from Northern China, bringing greater hardiness in Jujubes to North America. Very early to ripen and produce medium sized dark brown, sweet fruits. Small compact tree. Also know as the variety 'Autumn Beauty'.
Grafted Gallon Grown $42.00

SHANXI LI - This variety has the largest fruit, generally over 2 inch round, and is reddish brown, shiny and sweet. Self-fertile.
Grafted $50.00

European Pears

Pyrus communis

Listed below in ripening order

Plant 2 varieties for cross pollination

Dwarf $36.50 • Large Dwarf $41.50
Semi-Dwarf & Standard $35.00
Semi-dwarf Gallon Grown $35.00
Large Semi-dwarf & Standard $36.50
unless otherwise noted

UBILEEN - Very early ripening of large sweet fruit with a reddish blush. Good disease resistance. Bulgarian origin. **Zone 5-9**
Semi-dwarf Gallon Grown

EARLY GOLD *Pyrus ussuriensis* - Early ripening of sweet and juicy small, green skinned fruits, good for fresh eating, canning, and baking. Self-fruitful and resistant to fireblight. **Zone 3-7**
Semi-dwarf

SUMMERCRISP - Midsized, sweet fruits similar to the crispness of Asian pears. Keeps for several months. Fireblight resistant. Minnesota origin.
Zone 4-8
Large Standard

MOONGLOW - Medium-large, good quality fruit. Yellow skin with a red blush and white flesh. Very productive and highly fireblight resistant. Early ripening and quick to start bearing for a European pear.
Zone 4-9
Large Standard

RESCUE - Large, yellow-skinned pear with a red blush. Scab resistant fruits are sweet, juicy, and very productive. September ripening. Can keep until December. **Zone 4-8**
Semi-dwarf

URE - Greenish-yellow fruit. It is especially sweet and juicy, great for eating and canning. From Manitoba, Canada. Resistant to fireblight. **Zone 2-9**
Semi-dwarf

BARTLETT - The industry standard for canning and fresh eating. Juicy, sweet, and a reasonable keeper. Ripe in September. Tree is compact and very productive but not disease resistant. **Zone 5-9**
Large Semi-dwarf

ORCAS - Large yellow pear with red blush. Flavorful, all purpose, good scab resistance. Early mid-season ripening. From Orcas Island, WA.
Zone 4-9
Semi-dwarf

SECKEL - Known as the sugar pear for its extremely sweet and highly flavored, aromatic fruit. Excellent as a dessert pear; sweet as candy when dried. Also used for canning. Self-fertile variety in warmer parts of the country. In the north, it may require cross pollination to bear well. Resistant to fireblight, but scab susceptible. Hardy, widely adapted. **Zone 4-9**
Large Semi-dwarf

BOSC - Firm, brown, winter pear with narrow neck. Highly aromatic, excellent flavor. Very old variety from Belgium in 1807. Good fresh, dried, or cooked. Very good keeper, up to six months. Best pollinators: Comice, Orcas, Shipova. **Zone 5-9**
Semi-dwarf

COMICE - Large juicy yellow-green fruits, ripe in fall. Long the standard of excellence with which to compare other varieties. Best pollinators: Bosc, Orcas, Shipova. Fire blight resistant. **Zone 5-9**
Semi-dwarf

PEAR CROSSES

MAXIE *Pyrus communis x pyrifolia* - A cross between Nijesseiki Asian pear and Red Bartlett European pear. Produces a reddish-skinned crisp, sweet, juicy, and fragrant fruit. Scab resistant. **Zone 5-9**
Dwarf; Semi-dwarf

SHIPOVA *Pyrus communis x Aria edulis* **-** A unique cross between European pear and common whitebeam. Produces a highly fragrant and delicious 2-3" fruit in August or September. Best pollinators are Bosc, Comice, Orcas. Somewhat self-fruitful. Formerly known as Sorbopyrus, and sometimes mistakenly listed as a mountain ash hybrid because whitebeam was previously classified in the genus *Sorbus*. **Zone 4-9**
Semi-dwarf Gallon Grown

Asian Pear Trees

Pyrus pyrifolia

Easy to grow and very productive. Quick to bear, and all varieties are resistant to pear scab. Later ripening varieties keep a long time. The trees also have beautiful fall color.

Listed below in ripening order

Plant 2 varieties for cross pollination
unless noted as self-fertile

Dwarf $30.50 • Large Dwarf $35.50
Semi-dwarf $30.50 • Large Semi-dwarf $35.50
Semi-dwarf Gallon Grown $35.50
unless otherwise noted

SHINSEIKI - Heavy bearer of medium-large, mild, and sweet yellow fruits. Keeps well. Good resistance to pseudomonas and fire blight. Nijeseiki x Chojuro cross. Self-fertile. **Zone 3-9**
Semi-dwarf Gallon Grown

HOSUI - Sweet, crunchy golden brown medium/large fruit. Midseason ripening, best fruit quality. Susceptible to pseudomonas disease in wet climates. Prune trees only in summer to avoid disease problems. **Zone 4-9**
Dwarf on OH489; Large Standard

NIJISSEIKI - AKA Twentieth Century. High quality, round greenish-yellow fruit. Crisp and juicy, mid-season ripening. Very productive commercial variety. Self-fertile. **Zone 3-9**
Semi-dwarf Gallon Grown

CHOJURO - Luminous brown skinned fruit with a crisp, mildly sweet, aromatic flesh. High quality and heavy yield. Good keeper, nice fall color.
Zone 3-9
Semi-dwarf Gallon Grown

SHINKO - Large golden brown russeted skin. Very productive; keeps until spring. Taste test winner: very sweet and juicy. Fireblight resistant. **Zone 4-9**
Semi-dwarf Gallon Grown

KOREAN GIANT - Known as Don Bae in Asia. Very large brown fruit with excellent crisp flavor, fall ripening. Our best keeper. Precocious, productive tree. Fireblight resistant. **Zone 5-9**
Semi-dwarf Gallon Grown

Persimmon Trees

Diospyros

Attractive trees with glossy green leaves, turning brilliant orange and red in fall. Bright orange fruit remains after leaves fall, adding color to your backyard after other trees' fall leaves have faded.

CANNOT SHIP TO CA

ASIAN PERSIMMON

Diospyros kaki

Listed below in ripening order

Grafted $47.25 • Large Grafted $52.50
unless otherwise noted

CARDINAL - Non-astringent variety from Korea with exceptionally early ripening, large, sweet orange fruit. A naturally compact tree. **Zone 7-9**
Grafted Gallon $36.75

NISHIMURA WASE - Very early ripening, large round fruit ready about 1 month before Fuyu. A sweet and richly flavored variety also known as "Coffee Cake" with brown, mottled flesh and spicy flavor. Needs another variety with male flowers, such as Chocolate for cross pollination in order for the fruit to be edible when still firm. Otherwise fruit is edible only when soft. **Zone 7-10**
Grafted

JIRO FUYU - The variety most commonly sold in U.S. grocery stores. Jiro is similar to the original Fuyu from Japan, which ripens a week later. Medium-sized orange fruit of excellent quality. **Non-astringent,** eaten hard or soft. **Zone 6-9**
Large grafted

CHOCOLATE - Bright red skinned fruit with chocolate brown flesh. Great flavor when soft. Late ripening, oblong, small to medium size. Celebrated in Japan, where it is known as Tsurunoko. Self-fruitful and a good pollinator for Nishimura Wase.
Zone 7-10
Grafted

SAIJO - Japanese persimmon that translates as "the very best one." Small, seedless, yellow fruit is **astringent until ripe,** then sweet with excellent flavor. The oldest known persimmon tree is a grafted Saijo in Japan and is over 650 years old. **Zone 7-9**
Grafted

AMERICAN PERSIMMON

Diospyros virginiana

Native hardwood tree widely distributed across the eastern U.S. Fruit is **astringent until ripe**.

Grafted selections are female and can produce fruit without pollination. Seedlings are unsexed and could be either male or female. Considerably hardier than Asian persimmon varieties.

Grafted Gallon $36.75 • Grafted $47.25
Large Grafted $52.50
unless otherwise noted

EARLY GOLDEN - Early ripening. Large sweet fruit. This grafted tree is self-fruitful and seedless without a pollinator. Early Golden American Persimmon is the parent of Meader, with a larger fruit.
Zone 4-8
Large Grafted

NIKITA'S GIFT ™ - This Ukrainian selection is a cross between American and Asian persimmon combining the larger fruit size of Asian persimmon and greater hardiness of the American parent. 2½" diameter orange/red fruit is very sweet and delicious with no trace of astringency when ripe. Brilliant fall foliage in shades of red. Self-fruitful. **Zone 6-10**
XL Grafted $57.25

PRAIRIE STAR - Very large and unusually sweet persimmon. Firm variety with orange fruits. Seedless selection from Jim Claypool in Illinois. Self-fruitful. **Zone 4-8**
Grafted Gallon $36.75

DEER MAGNET - Produces high yields of fruit that hangs on the tree after ripening. Good to attract or feed wildlife. **Zone 4-8**
Large Grafted

AMERICAN PERSIMMON SEEDLINGS - Fine hardwood with black heartwood. Seedlings could be male or female. Females have a sweet 1-2" orange fruit in fall. Good rootstock for grafting. **Zone 4-8**
CANNOT SHIP TO ARIZONA
1-2' $6.00 each, 10+ $5.00ea, 100+ $4.50ea

Paw Paw Trees

Asimina triloba

Small trees native to the Northeastern USA, they produce the largest native fruits in North America - up to 6 inches long! They are sweet and custard-like with a rich flavor, and are highly nutritious. Large, tropical-looking leaves, attractively shaped trees, pest and disease free.

Plant two different varieties or 2+ seedlings for cross-pollination. Paw paws grow fairly true from seed. Hardy to **Zone 5.**

PAW PAW SEEDLINGS - These unnamed seedlings are the offspring of improved cultivars.
Band Pot $15.00; 2-3' $18.00; 3-4' $23.00

IMPROVED SELECTIONS

Grafted Band Pot $27.00

ALLEGHENY - One of the best tasting and most productive varieties. Bright yellow flesh has a rich, custard-like fruit with a hint of citrus.

KSU CHAPPELL™ - Especially large, sweet, and flavorful fruit. Ripens midseason. The fastest growing paw paw variety. It is also the most recent introduction from the KSU breeding program.
Grafted Band Pot $27.75

MANGO - The fastest growing paw paw variety with mango colored fruit of good size and quality. Selected in Georgia.
Gallon $36.00

MARIA'S JOY - Winner of paw paw contest for best flavor. Has medium to large yellow fleshed fruits. The tree is high yielding. Indiana origin.

PENNSYLVANIA GOLDEN - Earliest ripening selection, good quality. Skin turns yellow when ripe, golden flesh.

SUNFLOWER - Large fruit with excellent flavor, blooms later and ripens later than most. Few seeds. Said to be somewhat self fertile, but yield greatly increased with cross pollination. From Kansas.
Gallon $36.00

Medlar Trees

Mespilus germanica

Small, ornamental tree with edible brown fruits. Blooms in late spring with large flowers resembling single white roses. Fruit is eaten when soft (bletted), generally after a frost, or made into jams or sauces. Quick to begin flowering and fruiting. Disease resistant and widely adapted to soil types. Can tolerate some shade. Self-fruitful. **Zone 4-10**

Grafted $30.00

BREDA GIANT - Medium to large fruit. Eaten raw when soft, or used in jelly. When soft, fruit tastes like cinnamon spiced apple butter. A dwarf variety, grows to 8 ft tall. Dutch origin.

ROYAL - Very productive of medium sized brown fruit with smooth texture and good flavor. Naturally dwarfing tree. English variety.

Quince Trees

Cydonia oblonga

Quinces are mostly used for baking, jelly (*membrillo*), and increasingly popular in hard cider. Fruits have a lingering, wonderful fragrance and become sweeter and softer after cooking.

Naturally small trees with very showy blossoms.
Quinces are self-fruitful.

Grafted on Provence quince rootstock

Field Grown $40.00 • Gallon Grown $35.00

AROMATNAYA - Makes delicious jelly and can be eaten fresh as well. Soft, sweet and wonderfully fragrant. Disease resistant. Especially hardy Russian variety. **Zone 4-9**
Gallon Grown

KRIMSKAYA (CRIMEA) - Bright yellow fruit with a wonderful fruity fragrance. The fruit is big, crisp, and juicy. This variety is sweeter than most and is leaf spot resistant. **Zone 5-9**
Gallon Grown

ORANGE - Very large orange fleshed, fragrant fruit with a bright yellow skin. A great variety for jelly, sauces, or baking. Beautiful white flowers on a naturally dwarfing tree. **Zone 5-9.**
Bareroot

PINEAPPLE - Large, golden-yellow fruit with a slight pineapple flavor. Great for pies, cooking and jelly. Luther Burbank selection from 1899, notable for its particularly appealing texture. **Zone 5-9**
Bareroot

SMYRNA - Very large yellow fruit is extremely fragrant and makes excellent preserves. The best keeping quince. **Zone 5-9**
Bareroot; Gallon Grown

Plum Trees

Prunus

Freshly harvested homegrown plums are vastly superior in sweetness and flavor to grocery store purchased fruit—which are generally harvested under ripe in order to survive long distance shipping. Such fruits can never achieve the luscious, juicy quality of a tree-ripened plum.

Listed below in ripening order

JAPANESE PLUMS

Prunus salicina

Dwarf $38.75 • Large Dwarf $44.00
Semi-dwarf & Standard $35.75;
Large Semi-dwarf & Large Standard $40.75
unless otherwise noted

METHLEY - Very early ripening. Medium-sized purple fruits with juicy, sweet, red flesh. Resistant to black spot disease. Self-fertile, productive.
Zone 4-9
Standard; Semi Dwarf

BEAUTY - Medium-large, heart shaped, red Japanese plum. Ripens early. Very juicy, precocious, and productive. Great fresh or cooked. Somewhat self-fertile. **Zone 5-9**
Semi-dwarf, Large Semi-dwarf

BROOK RED - Dark red, medium-sized fruit. Plums are good fresh and can be made into jam, wine or juice. Self-fertile. **Zone 3-7**
Semi-dwarf

BLACK ICE™ - Ripens early, very sweet, and flavorful. Has black skinned fruit with melting juicy red flesh. Very hardy. Quick-to-bear variety, and naturally small. Somewhat self-fruitful, though more productive with a pollinator such as Toka. Bred by Brian Smith of River Falls, Wisconsin. **Zone 3-8**
Standard; Large Standard

SHIRO - Medium-sized juicy yellow clingstone Japanese plum. Very productive, good quality. Ripens early and is self-fertile. Somewhat tender in cold winter regions. **Zone 6-9**
Dwarf on St. Julian

WANETA *Prunus salicina x americana* **-** Sweet and juicy orange flesh with a very small pit, and a tart red skin—easy to peel. Delicious for fresh eating or jam. Mid to late summer ripening, quick to bear, and high yielding. A cross between Japanese and American plum from South Dakota. **Zone 3-8**
Semi-dwarf on Mustang

TOKA *P. salicina x americana* **-** Medium to large fruit is firm, spicy, sweet, and flavorful. Reddish-orange skin with yellow flesh. Good pollinator for Japanese and American plums. Late summer ripening. Exceptionally hardy selection from South Dakota. Self-fruitful. **Zone 3-8**
Semi-dwarf on Mustang; Standard

SANTA ROSA - Midsummer ripening Japanese fruits that keep well. Large, reddish-purple skin and flesh that is juicy and sweet with a hint of tartness. Self-pollinating. **Zone 5-9**
Large Standard

HOLLYWOOD - Dark purple leaves and pink flower buds, with white flowers in early spring. Medium red plums in early to mid summer.
Zone 4-9
Standard

NADIA CHERRY *Prunus salicina x* **-** Very large cherry-like fruits that are dark red inside and out. They are sweet, juicy, firm, and loaded with antioxidants. Good keeping quality. Best pollinated with other cherry plums or Beauty, Hollywood or Methley plum. **Zone 5-9**
Large dwarf on St. Julian

ELEPHANT HEART - Large, red-purple skinned fruit in heart shape with sweet red flesh. Very flavorful and freestone. Self-fertile but most productive cross pollinated with Japanese plum. **Zone 5-9**
Semi-dwarf

FLOWERING (UME) PLUM TREES

Prunus mume

SHIRO KAGA - Beautiful, fragrant, single white flowers in late winter—that are surprisingly hardy—and develop into small, tart, apricot-like fruits that can be eaten raw, pickled in salt (*umeboshi*), or made into jam. Also called flowering apricot, though neither a true apricot nor true plum. Small, self-fruitful tree, to 10'. Blooms late winter, ripens late spring. Hardy to **Zone 6.**
Grafted $35.00

EUROPEAN PLUMS

Prunus domestica

Dwarf $38.75 • Large Dwarf $45.00
Semi-dwarf $33.75
Large Semi-dwarf $38.75
unless otherwise noted

SUGAR PLUM - A very sweet, richly flavored, early ripening, small freestone prune plum developed by Luther Burbank. Suitable for fresh eating, drying and canning. Oblong reddish fruit, yellow flesh. Good for warm winter regions due to low chill needs. **Zone 5-9**
Dwarf on Citation $36.75

GREEN GAGE - Ancient Armenian variety still widely grown due to outstanding flavor. Medium sized, round greenish-yellow fruit, great for dessert, canning, sauce, or preserves. Productive tree.
Zone 4-8
Dwarf; Semi-dwarf

STANLEY - Large blue prune plum with sweet, yellow flesh. Late ripening. Self-fruitful. **Zone 4-9**
Semi-dwarf

BROOKS - Similar to Italian plum—with blue skinned, yellow-fleshed freestone fruit—but a little sweeter, larger and earlier ripening by a week. Good for fresh eating, drying into prunes, or canning.
Zone 5-9
Large Dwarf on St. Julian

ITALIAN - Delicious purple fruit with yellow flesh. Freestone prune plum splits neatly in half, dries well. Productive and self-fertile. **Zone 4-9**
Dwarf on St. Julian; Semi-dwarf

YELLOW EGG - Large oval, golden-yellow skin, and flesh is sweet and juicy, yet fairly firm. Somewhat freestone with very good quality for eating fresh and especially good for jam or canning. Self-fruitful, hardy, and productive. An English variety well known prior to 1676. **Zone 5-9**
Dwarf on St. Julian

BLUE DAMSON - Oval blue plums used exclusively for jam, jellies, and sauces. Fruit is small, freestone, tart, and produced in great abundance. Late blooming and very dependable. Originated near Damascus, Syria prior to the 1st century B.C. Self fertile. **Zone 4-9**
Semi-dwarf

IMPERIAL EPINEUSE - Large purple-red skinned fruit with yellow flesh. Exceptional sweetness and flavor in fresh eating or drying. **Zone 4-9**
Large Dwarf on St. Julian

PLUM CROSSES

$40.75 • Large $46.00

FLAVOR SUPREME PLUOT ™ *P. salicina x armeniaca* - Plum-apricot cross. Sweet, large fruit with a wonderful rich flavor. Firm red flesh, mottled dark red skin. Better adapted to cool wet climates than apricots and most other pluots. Pollinates with Japanese plums. Patented. **Zone 5-10**
Semi-dwarf

DAPPLE DANDY PLUOT ™ *P. salicina x armeniaca* **-** Plum-apricot cross with wonderful flavor. Red fleshed, freestone fruit; with yellow-green skin, and red dapples. Pollinates with Japanese plums. Patented. **Zone 5-10**
Semi-dwarf

DAPPLE SUPREME PLUOT ™ *P. salicina x armeniaca* - Midsummer ripening, juicy, sweet, red-fleshed fruits with excellent flavor. Greenish-yellow skin with red dapples. Patented. **Zone 5-10**
Semi-dwarf

FLAVOR GRENADE PLUOT ™ *P. salicina x armeniaca* **-** Elongated green fruit with a red blush, explosive flavor, and firm fruits that keep very well. Pollinates best with other pluots or Beauty plum. Patented. **Zone 6-10**
Semi-dwarf

SWEET TREAT PLUERRY ™ *Prunus salicina x avium* **-** A unique cross between cherry and plum. Red-skinned with delicious yellow flesh, and a small pit. Fruit is round, larger than a cherry, but small for a plum. Hangs well on the tree. Patented. **Zone 6-9**
Semi-dwarf

FLAVOR KING PLUOT ™ *P. domestica x armeniaca* **-** Plum-apricot cross. Ripens late season. Fruit has sweet-spicy flavor, with purple skin and red flesh. Tree is naturally small. Pollinates with Japanese plums and pluots. Patented. **Zone 6-10**
Large Standard on Halford

CANDY HEART PLUERRY ™ *P. salicina x avium* **-** Purplish-red skin and light red flesh. Really good eating fresh, ripens after most cherries and Japanese plums. Cross pollinates with Sweet Treat or Japanese plums like Shiro. Patented. **Zone 6-9**
Dwarf on Citation

BELLA GOLD PEACOTUM ™ *P. persica x armeniaca x salicina* - Peach-apricot-plum. Round yellow freestone flesh with yellow skin and red blush. Very sweet with a distinctive flavor. Pollinated best by Pluots, Japanese plums, or early blooming apricots. Patented. **Zone 5-10**
Dwarf on Citation

Citrus Trees

Citrus

Gallon Grown $35.00

CANNOT SHIP TO AZ, CA, FL, GA, TX

BEARSS LIME *Citrus latifolia* **-** Large yellow-green fruit is very juicy and seedless. Ripens mostly in winter and spring, although some can continue to ripen throughout much of the year. Needs less heat than most citrus to ripen, but is only **hardy to 28º F**, so in our climate it must be grown indoors most of the year. **Zone 9-11**

MEYER LEMON *Citrus x meyeri* **-** One of the hardiest citrus varieties with a good quality fruit. It is **able to survive temperatures down to about 17º F**. Outside the subtropics, it is often grown as an indoor plant over the winter, near a sunny window. Where temperatures remain above the mid 50's, it is nearly always blooming and fruiting, with a wonderful fragrance from attractive white flowers. When outdoor weather warms, it can spend the summer outside. Self-fruitful. Grafted onto Flying Dragon dwarf rootstock to induce early bearing and keep it under 6 ft. **Zone 8-11**

OWARI SATSUMA MANDARIN ORANGE *Citrus unshia* - Very sweet and easy to peel. Delicious flavor. **Hardy to 15º F**. Unusually hardy for an orange and one of the earliest ripening. In areas with mild winters and warm summers this tree could be grown outside—otherwise it needs to be taken inside for the winter. **Zone 6-9**

YUZU SUDACHI ICHANDRIN *Citrus x sudachi* A cross between yuzu ichandrin and mandarin orange. Makes a super high vitamin C juice. The tart, 2 in. fruit can be harvested green for the highest flavor. **Hardy to 0 °F.** Juice and rind are widely used in Japan for its unique fragrance and flavor; and as an ingredient in citrus vinegar, miso, soy sauce, soups and soba. **Zone 7-10**

Cornelian Cherry

Cornus mas

This unique dogwood species bears tasty edible fruits reminiscent of cherries, and has been cultivated in Europe and Asia since ancient times. Fruit can be eaten fresh, used in pies, preserves, and syrups. Very early spring bloom, with small yellow star-shaped flowers before the leaves appear. Some of the first flowers to appear in spring! Reddish-purple fall hues. Plant in well-drained rich soils. Resistant to anthracnose. Hardy to -30° F. **Zone 4-8**
See page 30 for more dogwood species.

CORNELIAN CHERRY SEEDLINGS - Bright, olive-shaped edible red fruits and appear among the dark green glossy leaves in late summer. If left alone, it will grow as a dense, bushy shrub great for screening and hedges, growing to 20 ft. Full sun to part shade.
Large Plug $10.00

IMPROVED SELECTIONS

ELEGANT - Large fruited, heavy-bearing selection. Sweet, red pear-shaped fruits appear in late summer. Ukrainian variety. Plant with another variety or seedling for cross-pollination to ensure good crops.
Band Pot $32.50; Grafted

Pomegranate Trees

Punica granatum

Grafted Gallon Grown $32.00

A.C. SWEET - Good flavored unusually sweet variety with edible soft seeds. Pink fruit keeps well. Self-fruitful. Developed by A.C. Combe in Arizona, very popular in Utah as well. One of the hardiest varieties. **Hot summers are necessary** to ripen fruit. **Zone 6-10**

HAKU BOTAN - A small shrub with white to pale yellow double flowers over the summer. The best variety for cool summer locations, ripening sweet, low acid **white fruit** in fall. **Zone 7-10**

KAZAKE - Medium to large, bright red fruits with sweet-tart juice arils. Natural dwarf, under 6 ft. Heat and drought tolerant once established in **Zone 8-10** locations with **hot summers.** Self-fertile.

PARFIANKA - This variety gets the highest rating for flavor. Large red fruits that are pretty sweet with a little tartness, and red arils with tiny edible seeds. Good for juice and great for fresh eating. Productive and self-fruitful. **Zone 7-10** but needs a **hot summer** and long growing season to ripen.

Mulberry Trees

Morus

The American landscape industry has done a disservice to the public and to wildlife by promoting fruitless male mulberries as shade trees. They're not especially ornamental and are notorious pollen producers, as many allergy sensitive people are aware.

The named varieties we sell are all **self-fruitful grafted females**, producing little or no pollen and loads of sweet, nutritious fruit. Without a male, female mulberries produce seedless fruits that people, birds, and other creatures find delicious. To avoid a mess, plant in grassy areas away from patios, driveways, etc. where stains can be a problem. Non-staining varieties can also be planted. Grown freely—they can achieve the stature of a nice shade tree—or with annual pruning they can easily be maintained as a bush, since the fruits are produced on the new growth. White mulberry leaves have medicinal value and make a healthy tea.

Most of the following named varieties are *Morus alba* or natural crosses with *Morus rubra.*

Grafted $32.75 • Large Grafted $37.75
Grafted Gallon $35.00
Self-rooted $40.00
unless otherwise noted

EARLY BIRD - The earliest ripening variety. Reddish-black fruit. **Zone 4-9**
Self-rooted; Grafted Gallon

GERARDI DWARF - Naturally dwarfing form of mulberry. Quick to bear, sweet black fruit. Originally from the Himalayas. Resistant to popcorn disease.
Zone 4-9
4" Pot $12.00; Grafted Gallon

ILLINOIS EVERBEARING *Morus alba x rubra* The best hardy variety. Extremely precocious, self-fruiting, and heavy yielding over much of the summer. Very sweet delicious flavor and seedless.
Zone 3-8
Grafted; Grafted Gallon; Self-rooted

KOKUSO - Dark-fruited Korean variety. Earlier ripening than Illinois Everbearing with very high quality firm fruit. Reportedly even hardier and grown even farther north, up into MN. **Zone 4-9**
Grafted Gallon; Grafted; Large Grafted

MOJO DWARF *Morus indica (rotundiloba)* Large, sweet, black fruit ripening over a long summer season. Japanese selection by H. Matsunaga. Won first prize at the Chelsea Flower Show where it was called "Charlotte Russe." Ornamental rounded leaves. **Zone 7-10**
Quart $18.00

OSCAR - Edible in the red stage when they have a raspberry like flavor, or in the black stage when they are among the finest flavored of hardy mulberries. Very early ripening. **Zone 5-9**
Grafted Gallon

PAKISTAN *Morus macroura* **-** The king of mulberries, with fruit up to 4½ inches long. Sweet and especially flavorful. Very productive over a 2-month period. Maroon fruit doesn't stain. Very vigorous. **Zone 7-10**
Grafted; Grafted Gallon

RED SHAHTOOT *Morus macroura* **-** Very large sweet red fruits. Shahtoot translates as "King Mulberry". For warmer climates. **Zone 8-10**
Grafted Gallon

SHANGRI-LA - Early ripening of big, black delicious berries on a small tree. Very large, heart shaped leaves. A southern variety from Florida, yet grown as far north as Washington D.C. and as far west as Washington state. Possibly our most disease resistant variety offered for the humid Southeast. **Zone 7-9**
Grafted Gallon

SILK HOPE Excellent quality with a long fruiting season. Widely adapted, tolerates drought or high humidity. Similar to Illinois Everbearing, but superior in size and flavor. North Carolina selection by A. J. Bullard. **Zone 5-9**
Band Pot $28.75; Grafted Gallon

TRADER - Sweet and juicy 1 ½ inch long black fruit from Jul. through early Sept. The original Trader mulberry is a remarkably hardy tree, over 125 years old, from Oriska, North Dakota.
Zone 3-8
Small Pot $9.00

WEEPING - Very strong weeper, needs to be staked to the desired height, then it will weep to the ground. Small, sweet, black fruit in early summer.
Zone 4-10
Grafted Gallon

WHITE FRUITING MULBERRIES

Morus alba

This species is used as a host for silkworms. White fruited mulberries are very sweet and **do not stain**. Especially good for drying.

EL DORADO - New Hungarian variety with large round, sweet white fruit. **Zone 5-9**
Grafted Gallon

SWEET LAVENDER - Very sweet white fruit with a touch of lavender. Use fresh or dried.
Zone 4-10
Grafted Gallon

WHITE IVORY - Sweet white fruit for fresh eating or drying. Has a pure white fruit. **Zone 6-9**
Grafted Gallon

BEAUTIFUL DAY - Very sweet pure white fruit will not stain. Great for fresh eating or drying. Cold hardy. **Zone 6-9**
Grafted Gallon

TRUE BLACK MULBERRIES

Morus nigra

Mulberry fans consider this species the best flavored. Large, soft, juicy, intense, sweet-tart berries from July to September. **By far the most staining mulberry.** Of central Asian origin. **Zone 7-10**

BLACK BEAUTY - Very tasty dark, black, sweet-tart fruit. A natural dwarf to 12 feet, branching low from the ground. Easy to grow as a large shrub that can be maintained at 6-8feet with pruning.
Grafted

PERSIAN FRUITING BLACK - Extremely flavorful, round, juicy sweet-tart fruit. Mulberry fans consider this species the best flavored. Blood-red staining potential. Best adapted to the Southwest and West Coast states. Grows to 25 feet if left unpruned.
Grafted

MULBERRY SEEDLINGS

RUSSIAN MULBERRY SEEDLING *Morus alba tatarica* **-** Rootstock for grafting varieties of female mulberries for fruit, or for wildlife plantings. Seedlings will be either sex, females producing fruit that is typically smaller and less flavorful than from grafted varieties. Fruit can be white or black. Half on average are fruitful. **Zone 5-9**
2yr Seedling $5.50ea; 10+ $5.00ea; 100+ $4.50ea

MAINTAINING FRUIT TREES IN SMALL SPACES

The advantages of dwarfing rootstocks are ease of harvest, quick bearing, and larger fruit. Small trees can be planted much closer together, allowing for more trees and greater variety in a small area.

Dwarf trees with heavy fruit loads may need staking or other support to keep from falling over. Thinning heavy fruit loads can lessen this problem and will increase the size of remaining fruit. Because of their smaller root system, dwarfs are more drought susceptible. Take care to water well.

Semi-dwarf and standard rootstocks are much better anchored and more drought tolerant. They can be kept small for ease of harvest and fit into smaller spaces by summer pruning. Pruning in summer - June to early August - has a naturally dwarfing effect on trees.

Summer pruning avoids the stimulating effect that dormant pruning has on trees. With annual pruning when a tree is young, trees can be maintained as short as can be reached from the ground with arm outstretched. This can make harvest much easier. If bird predation is a problem, as it often is with cherries or mulberries, a compact tree is much easier to net.

Other factors affecting eventual size of fruit trees include the natural fertility of the site, fertilizer, age of the trees and variance between varieties.

Mountain Ash

Sorbus aucuparia

RABINA - Russian variety with good tasting fruit. Fine ornamental tree with attractive, abundant flowers and very large clusters of orange fruit. Good pest and disease resistance. **Zone 3-9**
Grafted $30.50

EUROPEAN MOUNTAIN ASH SEEDLINGS
Small tree with creamy white flowers in clusters, followed by bunches of reddish orange fruits in late summer. Good fall color and the fruit is relished by birds. **Zone 3-9**
3-4' Seedling $16.00

Service Trees

Cormus (Sorbus) Domestica

SERVICE TREE - Very rare European fruit tree with a rich history and 500-year lifespan. Huge crops of small, pear-like fruit which are delicious when soft and brown, like a medlar. Strong flavors of spice, chocolate, and tropical fruit. Used for making cider, jam, syrup, or dried for use as a digestive medicine. Unripe fruit was traditionally used in winemaking before sulfites and other modern additives. Beautiful pinnate foliage with brilliant fall color. Self-fertile, but cross pollination between two or more seedlings will increase fruit production and size. Widely adapted, native from the Mediterranean to eastern Europe and the British Isles. **Zone 5-10**
Gallon Grown Seedling $22.00

Olive Trees

Olea europaea

Olives are small, rugged, drought tolerant, semi-evergreen trees that require full sun and good drainage. Best suited to areas with long, hot summers, though they have been grown outdoors as far north as Seattle and can also be grown in a pot in a sunny window. Fruits are pickled and naturally cured for 4 months, or pressed for oil. Olives are one of the oldest cultivated fruit trees, dating back to 3000 B.C. The leaves contain oleuropein, a phenolic compound with anti-fungal, anti-viral and anti-bacterial properties.

LECCINO - An older Italian variety, now being grown commercially on a limited scale in Oregon's Willamette Valley. Olives are large, flavorful and ripen early on a relatively hardy tree. Disease resistant. For warm summer areas. Plant with another variety for cross pollination. **Zone 8-10**
Gallon $36.50

NIKITA JUBILEE ™ - Among the hardiest and earliest ripening olives, with large tasty fruit eaten in the green or black stage. Also used in olive oil production. High yielding. From the Nikita Botanical Garden in Yalta, Ukraine. Plant with another variety for cross pollination. **Zone 7-10**
Gallon $36.50

SEASCAPE ™ - Large, delicious fruit (after curing) can be harvested when green or black. Productive tree. Ukrainian origin. For locations with a warm summer. Plant with another variety for cross pollination. **Zone 8-10**
Gallon $36.50

Fig Trees

Ficus carica

Ripe figs don't ship well, so the only way to enjoy a truly ripe fig is to grow your own at home. Luckily they are easy to grow wherever temperatures stay above 0º F. Abundant harvests can be preserved by drying, or making delicious fig jam.

All varieties listed are self-fruitful, like sun, and can be grown as a container plant, tree, or multi-stemmed shrub. **Zone 7-10**

4" Pot $16.50 • Quart $18.50
Medium $21.00 • Gallon $30.00

AFGHAN - Good sized, dark, sweet fruit. Afgan fig is thought to be a bit more winter hardy than the common fig.
Medium

BRUNSWICK - Very large, violet to reddish-brown skinned sweet fruits, with amber to pink flesh. A naturally dwarfing, slow-growing variety suited to warm regions, where it will ripen two crops. In cooler regions, one crop of huge figs are produced. AKA Vashon Violette or Magnolia.
Gallon

DESERT KING - Dark, green-skinned fig with pink flesh. Matures in cool climates and is our most dependable variety in western Washington. Excellent quality fresh or dried.
Quart, Gallon

ITALIAN HONEY - AKA Lattarula. Yellow-skinned delicious figs with amber flesh. Reliable variety in the NW able to ripen 2 crops a year in warm summer regions. Used fresh or dried.
Gallon

LSU PURPLE - Quick to bear. Produces delicious, medium-sized purple-skinned figs in great profusion. High yield of fruits in midsummer in northern regions. In hotter locations, can bear a large 2nd crop in late summer to fall. A small closed eye at the base of the fruit keeps bugs out. A widely adapted selection from the LSU fig breeding project.
Zone 7-10
Quart; Gallon

OLYMPIAN - A variety found in Olympia, WA with large, purple-skinned, ruby-fleshed fruit. Ripe early with a second crop in warm summers.
Quart

VIOLETTE DU BORDEAUX - AKA Negronne. A small tree with medium-sized dark-skinned fruit. Sweet, firm, flavorful figs. Very good fresh or dried. Reliable even in cool climates.
Gallon

CERTIFED ORGANIC JAMS AND JELLIES

GIFT BOXES: A certified organic mix of apple butter, kiwi jam, mulberry jam, plum jelly, or blackberry jam.

All made from our **organic** orchard produce.

Gift Bag: 4 2-oz Jars **$12.00**
Gift Box: 3 8-oz Jars **$19.50**
Shipping $22.00

FRUIT TREE ROOTSTOCKS

Start or expand your fruit orchard by grafting your own trees! Pair with our **scionwood** (see page 16), swap with friends, or use material from your existing fruit trees. A grafting tutorial video featuring Michael Dolan is available on our YouTube channel.

Pear/Quince Rootstocks

CALLERY PEAR - A common standard-size pear rootstock for all pears—including Asian pears—with some dwarfing effect on Asians. Induces high yield at an early age. Tolerant of wet soil and fireblight resistant. **Zone 5-8**
$4.50 each

OHxF 333 PEAR - Semi-dwarfing rootstock for Pear, half of standard size. Resistance to fireblight, collar rot, woolly pear aphids, and pear decline make this a very healthy stock. Precocious, and well-anchored. Trees are very productive. **Zone 4-9**
$5.00ea, 10+ $4.75ea, 100+ $4.50ea

PYRUS BETULAEFOLIA - Semi-dwarfing for Asian pear; standard rootstock for European pear. Fireblight and pear decline resistant. **Zone 4-9**
$4.50 each, 10+ $4.00ea

PYRUS COMMON *Pyrus communis* **-** For grafting or budding pears. The most drought tolerant pear rootstock. Seedlings from improved varieties.
$4.00 each

PYRUS USSURIENSIS - Pear rootstock that is much hardier than *P. betulifolia* and more fireblight resistant. Especially popular as an Asian pear rootstock. **Zone 3-7**
$4.50 each, 10+ $4.00ea

PROVENCE QUINCE *Cydonia oblonga* - Used for dwarfing pears, and also used as a rootstock for quince. **Zone 5-9**
$4.50 each, 10+ $4.00ea

Apple Rootstocks

$4.50 each, 10+ $4.00ea
unless otherwise noted

BUDAGOVSKY (BUD) 9 - Hardy Russian dwarfing apple rootstock. Similar to M9, but more winter hardy. Induces very early fruiting and larger fruit, so it usually requires support. The tree is slightly smaller than M26. Leaves and wood are reddish which helps distinguish the rootstock from the grafted part.
Zone 3-10

M7 (EMLA 7) - Well anchored, hardy semi-dwarf apple rootstock. Tolerates heavier soil, and has some resistance to fireblight and collar rot.
Zone 4-9

M26 (EMLA 26) - This rootstock will create a dwarf tree, typically 8-12 feet. Can be kept smaller with summer pruning. The advantage of dwarfing rootstocks is in ease of harvest and quick bearing. Small trees can be planted much closer together, allowing for more trees and greater variety in a small area. Best on well drained soil. **Zone 4-9**

M111 (EMLA 111) - A vigorous, well anchored, drought tolerant rootstock. Creates a large semi-dwarf tree 15-17' unpruned. Widely adapted to light or heavy soils. Resistant to collar rot.
Zone 4-9

BUDAGOVSKY (BUD) 118 - Very hardy Russian semi-dwarf rootstock, similar to M111 in tree size and site adaptability. Foliage and wood are reddish.
Zone 2-10

ANTONOVKA - Creates a hardy full sized standard tree. Semi-dwarf and standard rootstocks are much better anchored and more drought tolerant than dwarf. They can be kept small by summer pruning, for ease of harvest or limited space. Seedlings from the parent tree Antonovka which produces large round yellow apples with white flesh.
Zone 3-9

PACIFIC CRABAPPLE *Malus fusca* **-** Able to grow in very wet sites, hence the alternate name "swamp crabapple." Suitable as a rootstock for apples on sites otherwise too wet. Widely adapted West Coast native from California to Alaska. Tiny, tart fruits. **Zone 5-8**
2yr 18-36" $7.50ea; 10+ $7.00ea

Stone Fruit Rootstocks

KRYMSK ® 1 PRUNUS - Russian semi dwarf rootstock for plum, peach, nectarine and apricots. Very winter hardy and tolerant of wet soils. Does not sucker or require staking. **Zone 4-8**
$6.50each, 10+ $6.00ea, 100+ $5.50ea

KRYMSK ® 5 CHERRY *P. fruticosa x P. lannesiana* - A cold hardy and heat tolerant rootstock for sweet and tart cherries, widely adapted to a range of soil types including heavier soils than Mazzard. A well anchored rootstock that produces good sized cherries. Moderately dwarfing to 85% of standard. Russian origin. **Zone 4-8**
$6.50 each, 10+ $6.00ea

LOVELL PEACH *Prunus persica* **-** Compatible with all *Prunus* species: peach, almond, plum, apricot, and nectarine. Provides a well anchored, vigorous, long-lived tree with good disease resistance. Widely adapted. **Zone 4-9**
$5.50 each, 10+ $5.25ea, 100+ $5.00ea

MARRIANA 26-24 *Prunus sp.* **-** Semi-dwarfing rootstock for plums, apricots and most almonds. Widely adapted and more tolerant of wet soils than peach rootstocks. With resistance to root rot, nematodes and brownline. Hardy to **Zone 4.**
$4.50 each, 10+ $4.00ea

MAZZARD CHERRY *Prunus avium* **-** Standard cherry rootstock for sweet, tart, and flowering cherries. Hardy and widely adapted, drought tolerant, and well anchored. Resistant to root rot and nematodes. Large trees will require annual pruning to maintain an easily harvestable size. Excellent for wildlife planting. Wood has timber value. **Zone 4-8**
$5.50 each, 10+ $5.00ea, 100+ $4.50ea

NEMAGUARD PEACH *Prunus persica* **-** Compatible with all *Prunus* species: peach, almond, plum, apricot, and nectarine. Best on well-drained sites. On heavy soils, site on sloping ground or on a mound. Resistant to Nematodes. **Zone 4-9**
Band Pot $11.00; $5:50each, $10+ $5.25ea, 100+ $5.00

MYROBALAN PLUM *Prunus cerasifera* **-** Called cherry plums for their small plum fruits. These vigorous seedlings are widely adapted and commonly used as rootstock for every type of plum. Fruits are eaten fresh or made into jam. **Zone 4-9**
$4.50 each

PRUNUS MYRO-29C *Prunus myrobalan* **-** Widely adapted selection of Myrobalan used as rootstock for plums, and can also be used for almonds. Good resistance to root rot and nematodes. Makes a large semi-dwarf tree if unpruned but can be maintained at any height with summer pruning. **Zone 4-9**
$4.50 each

SAINT JULIAN A *Prunus insititia* **-** Dwarfing rootstock for plums (except Stanley), apricots, and peaches. Induces early bearing and high yields. Widely adapted and winter hardy. Causes some suckering. **Zone 4-9**
$5.00 each, 10+ $4.75ea

Other Rootstocks

AMERICAN PERSIMMON *Diospyros virginiana*
These seedlings can be used as hardy rootstock for grafting Asian and American persimmon.
Zone 4-8
1-2' $5.50 each, 10+ $4.50ea, 100+ $4.00ea

RUSSIAN MULBERRY *Morus alba tatarica*
These hardy seedlings are the best rootstock for grafted varieties of mulberries. **Zone 5-9**
2yr $5.50ea, 10+ $5.00ea, 100+ $4.50ea

*For chestnut rootstocks, see chestnut seedlings (**page 26-27**). Chestnut scionwood information can be found there as well.*

SCIONWOOD:

We offer scionwood (dormant cuttings) for many plant varieties that we sell including: apple, apricot, almond, Asian pear, chestnut, cherry, European pear, fig, goumi, jujube, kiwi, mountain ash, medlar, mulberry, peach, nectarine, plum, persimmon, quince, walnut, and more.

Scionwood is sold by the foot.

$5.00 per foot

Scionwood orders are shipped separately by UPS 2nd Day Air and handling is $17.50 for up to 35 sticks

*Most scions must be **grafted onto a compatible rootstock.** Fig, goumi, kiwi, and elderberry can be rooted from cuttings.*

BERRY BUSHES

Elderberry Bushes

Sambucus

Recent clinical trials have confirmed the ability of elderberry juice in greatly reducing the duration and severity of cold and flu symptoms. These shrubs are very easy to grow, widely adapted and quick to bear. In addition to the antiviral properties, elderberries are used to make wine, sauce, and preserves.

The flowers also have anti-inflammatory properties and are eaten as a vegetable, often battered or fried. Flowers of European selections (*Sambucus nigra*) are very fragrant, often used in drinks.

1yr $10.00 • 4" Pot $15.00 • Medium $21.00 Gallon $30.00 • Large $31.50

EUROPEAN ELDERBERRIES

Sambucus nigra

KORSOR - This Danish black elderberry cultivar is grown commercially because of its high yields. Well known for its exceptional medicinal qualities and immune boosting properties. Big clusters of large dark blue, juicy berries. To 8 ft. **Zone 4-9**
Gallon

MARGE *Sambucus nigra x canadensis* - An especially vigorous variety with large fruit. Cross between European and North American black elderberry, has performed better in the Midwest than pure European varieties with very high yields.
Zone 4-8
4" Pot; Medium

SAMDAL - A commercial variety from Denmark with big clusters of black fruits that are especially high in antioxidants. **Zone 3-7**
Gallon; Large

SAMPO - High yielding Danish selection with especially flavorful black fruit. Good pollinator for other European elderberry varieties. **Zone 4-9**
1yr; Gallon

NORTH AMERICAN ELDERBERRIES

Sambucus canadensis

ADAMS - Very large clusters of early ripening, good sized purplish-black berries. Used for jam, juice, wine, and can be eaten fresh. Sweeter than most elderberries. Somewhat self-fruitful, but will yield best with another *S. canadensis* variety. New York origin. **Zone 3-8**
Gallon

BLACK DIAMOND ™ - A new selection from New York that produces large clusters of unusually sweet, flavorful, early ripening, large berries. They have a short, uniform harvest window and store well. It's a more compact shrub than other cultivars, averaging 5 ft. high and 3 ft. wide. **Zone 4-8**
4" Pot $22.00

BOB GORDON - High yielding Missouri selection with medium to large berries in huge clusters that are unusually sweet, yet less subject to bird predation due to upside down hanging form.
Zone 3-8
Medium; Large

JOHN - Slightly less productive than Adams, but with larger berries and clusters. Sweet berries are used for jam, juice, wine and are eaten fresh. Somewhat self-fruitful but better yielding with second *S. canadensis* variety. Later ripening. From Nova Scotia, Canada, 1954. **Zone 3-8**
4" Pot; Gallon

RANCH - Came from an abandoned homestead and was planted in the late 1800's. A determinate variety that is more tolerant of drought and harder soils. Short-season bearer. Compact shrub that grows to about 5 ft. Similar to Nova and York and is a good pollinator for both. **Zone 3-8**
1yr; 4" Pot; Medium

WYLDEWOOD - Medium to large black berries. They develop on large flower clusters—nearly a foot across—on new shoots. A very productive variety found in Oklahoma. **Zone 3-9**
4" Pot; Medium

BLUE ELDERBERRY SEEDLING *Sambucus caerulea* - A fast growing, hardy shrub with large clusters of tiny white flowers, followed by huge quantities of light blue fruit. Used for jams, wine, and preserves. Native to the West Coast. **Zone 3-8**
1yr $5.00; Gallon $25.00

NORTH AMERICAN - These are North American black elderberry seedlings of York and Nova parentage. **Zone 3-8**
2 yr $6.00 ea, 10+ $5.00ea

ORNAMENTAL ELDERBERRIES

Sambucus nigra

BLACK BEAUTY - Very ornamental purple foliage with large, flat clusters of fragrant pink flowers. Grows to 10'. Maintains color in shade or sun. English origin. **Zone 4-7**
Gallon $30.00

EMERALD LACE - Very ornamental with small, finely cut lacy leaves. An extreme vase-shaped form and a smaller overall stature to about 8 ft. Also known as 'Fern Leaved Elderberry'. **Not self-fruitful**. **Zone 3-9**
Gallon $30.00

Serviceberry Shrubs

Amelanchier alnifolia

SMOKEY - This is the most common commercially grown variety in Canada, with large, sweet flavorful fruit in great abundance. Grows up to 10 ft. if unpruned, can be maintained at 6 ft. From Alberta and hardy to **Zone 2.**
2yr Seedlings $9.00 each, 10+ $8.00 ea, 100+ $7.00 ea

SUCCESS - Oldest named cultivar. It is still popular for the large size and flavor of its purplish-black fruits. **Zone 3-8**
Small Cutting Grown $10.00

REGENT SERVICEBERRY SEEDLINGS - A more naturally dwarfing form of serviceberry, 6 ft. or less at maturity. Originally from Regent, North Dakota. Very high yielding of especially sweet, dark fruit in early summer. **Zone 2-8**
12-18" $9.00ea, 10+ $8.00ea, 100+ $7.00ea

SERVICEBERRY SEEDLINGS - Masses of white flowers in spring followed by tasty blue fruits in summer. Good fresh and in pies, pancakes, etc. Red-orange fall color. Grows to 8-10 ft. **Zone 3-8**
18-36" $7.50, 10+ $7.00, 100+ $6.50; 3-4' $9.25

Honeyberry Bushes

Lonicera caerulea var. edulis

Small, shade-tolerant shrub native to Siberia and Japan. AKA Haskap. An elongated, blueberry like fruit ripens a month or more before the earliest blueberries. Sweet enough to enjoy fresh with tiny seeds and can be used in cooking as with blueberries.

Plant two different varieties with compatible bloom period for cross-pollination

Liner Pot $7.00 • Medium $22.50

EARLY BLOOMING

INDIGO GEM - Especially flavorful, sweet, blue fruits for fresh eating or drying. Medium sized bush is open, vigorous, and productive. Shade-tolerant in hotter climates. Early blooming; pollinates best with Aurora, somewhat self-pollinating. **Zone 2-8**
Liner

TUNDRA - Large, long blueberry like fruit that ripens weeks before blueberries. Vigorous shrub, very productive. University of Saskatchewan, Canada introduction. Early blooming, pollinates with Aurora. **Zone 3-8**
Liner

MIDSEASON BLOOMING

AURORA - Hardy and sweet powdery-blue berries on a vigorous shrub growing up to 6 ft tall, 3 ft in-width. Midseason blooming; will cross-pollinate with Tundra and Indigo Gem. Somewhat self-pollinating. **Zone 3-8**
Liner

LATE BLOOMING

BLUE PAGODA - Big sweet fruit with a firm texture and good flavor. From Northern Japan where it is known as Chitose No. 11. Mature height is around 4-5 feet. Late blooming; pollinates best with Blue Sea. **Zone 3-8**
Medium; 2-3'

BLUE SEA - Unusually large, sweet, flavorful variety from Northern Japan. A late blooming selection that pollinates best with Blue Pagoda.
Zone 3-8
Medium; 2-3'

Aronia Bushes

Aronia melanocarpa

Shrub with black, blueberry sized incredibly nutritious and brilliant red fall color. Tolerant of wet sites, widely adapted, sun or shade. **Self-fruitful.** Also known as Chokeberry. **Zone 3-8**

VIKING - Select cultivar for fruit and fall color. Grows to about 6 ft. Self-fruitful. Cutting grown.
4" Pot $16.00; Large Gallon Grown $25.00

NERO - Similar to Viking in fruit and foliage, but only 4 ft. at maturity. Self-fertile. Cutting grown.
Large Gallon Grown $25.00

ARONIA SEEDLINGS - Small 4-6 ft. shrub with black, incredibly nutritious fruits in large clusters. Juice is delicious if sweetened. White flowers in spring followed in fall by black berries and brilliant red fall color. Tolerant of wet sites, widely adapted, sun or shade. Self-fertile.
2yr $6.00 each, 10+ $5.00. 100+ $4.50

Blueberry Bushes

Vaccinium

The varieties listed below ripen over a 3½ month period. Simply freezing the surplus can ensure a year round supply. With our large selection of varieties, there are plants suited to most locations in the U.S. Blueberries appreciate a good mulch of sawdust, compost, coffee grounds or other organic material—reapplied every winter or spring. They like an acid soil high in organic matter. If yours isn't acidic, add a generous amount of peat moss or sulfur.

NORTHERN HIGHBUSH BLUEBERRY

Vaccinium corymbosum

Small Plug $5.00 • Liner $6.50
Large Liner $10.00 • 4" Pot $12.50
Quart $15.50 • Medium $15.00
Gallon $21.00 • Extra-large $30.00
Ball & Burlap 4-6' PICK UP ONLY $45.00

Listed in order of ripening

EARLIBLUE - Our earliest ripening variety with large, delicious berries that are cracking resistant. Moderate yield. Intolerant of wet growing sites. Red fall color. **Zone 5-8**
Quart; Ball & Burlap

PATRIOT - Very early ripening, large fruit, productive, great flavor. Resistant to Phytophthora, very tolerant of wet sites. Red fall color. **Zone 3-8**
Large Liner; Gallon & 2 Liter $21.00

DUKE - Productive, medium-large, light blue berries of mild, sweet flavor. Late blooming, early ripening, high yield, and resistant to mummy berry. Orange fall color. **Zone 4-8**
Quart; Ball & Burlap

SPARTAN - Very large berries, excellent flavor, early mid-season ripening. Mummy berry resistant. Intolerant of wet sites or heavy clay. Red fall color. **Zone 5-8**
Quart

NORTHLAND - The hardiest highbush blueberry, surviving -40°F. Very productive, medium-sized berries, very sweet. Yellow-orange fall color, yellow branch color, compact bush. **Zone 3-8**
Quart

HARDYBLUE - A very sweet, medium-sized berry with superior flavor. Heavy yielding in midsummer. Widely adapted, especially tolerant of heavy clay soil. Yellow fall color. **Zone 4-8**
Extra-large $30.00; Ball & Burlap

EBERHARDT - Popular local variety from Olympia, WA. Big fruits. Very productive and flavorful. Ripens mid-season. **Zone 4-8**
Extra-large $30.00; Ball & Burlap

BLUECROP - Large, aromatic berries. Light blue, good dessert quality, very productive, ripening over a 6 week period in midsummer. Cracking resistant. Red fall color. **Zone 4-8**
Quart; Gallon

BLUEJAY - Excellent flavor, medium to large fruit, and productive. Yellow-orange fall color, bright yellow branches make it a great winter interest. Highly resistant to mummy berry disease. **Zone 4-8**
Quart

BLUE RIBBON ™ - Early to midseason, extended harvest of high yielding in big clusters. Sweet and flavorful with large and firm fruits. Good keeping quality. **Zone 4-8**
Quart $16.50; 2 Liter $22.00

REKA - One of the heaviest bearing northern highbush varieties. Early-mid season ripening, medium sized fruit. **Zone 4-7**
Quart

OLYMPIA - Medium-large fruit is sweet and especially flavorful. Midsummer. Frost susceptible in spring. Red and orange color in fall. Selected by Joe Eberhardt near Olympia, WA. **Zone 5-8**
Extra-large $30.00; Ball & Burlap

TOP SHELF ™ - Has a concentrated harvest of very large firm berries known for great flavor and high yields. Midseason ripening. **Zone 4-8**
Quart $16.50; 2 Liter $22.00

CHANDLER - Surpasses Darrow as the largest blueberry, as big as a quarter, with a delicious flavor. Has the longest ripening season, over 7 weeks! Very popular and productive. **Zone 4-8**
Large Liner; Quart; Gallon

TORO - Outstanding ornamental northern highbush with bright pink flowers turning to white in spring. Huge midsummer ripening berries are produced in large easy to harvest clusters. Crimson fall color. **Zone 4-8**
Large Liner; Gallon; Extra-large

DARROW - Huge fruits with a good, slightly tart flavor. August ripening. Orange fall color. Mummy berry resistant. **Zone 5-8**
Quart

LEGACY - Vigorous variety grows to 6 ft. and is evergreen in mild winter areas, offering the potential for use as a year round screening plant. Has heavy yields of medium to large fruit with a great flavor. Leaves turn orange over winter. **Zone 5-9**
2 Liter $21.00

RUBEL - Intensely flavored fruit is the main reason this old variety is still widely grown. Small fruit makes it the perfect berry for baking. Rubel has twice the antioxidant level of most blueberries, making it a healthy choice. **Zone 4-8**
Extra-large; Ball & Burlap

JERSEY - An older variety, still widely grown because of broad climatic tolerance and disease resistance. Productive of medium-sized sweet berries. Late ripening. Yellow fall color. **Zone 4-8**
Quart; Gallon

LIBERTY ™ - Brigitta x Elliot. The most popular new variety with commercial growers. Produces large crops of big, firm, flavorful berries late in the season that keep well. Very vigorous bush reaching 8 ft. unpruned. MSU patent included. **Zone 4-7**
Quart

DIXIE - Large, fragrant berries are late ripening, very productive. Mummy berry resistant. **Zone 4-8**
Extra-large; Ball & Burlap

ELLIOT - Late ripening variety and a good keeper, effectively extending the fresh blueberry season into the fall. Very heavy yield of medium-sized fruit. Late blooming, resistant to mummy berry and cracking. Dark red leaves in fall. Ripens too late in cool areas some years. **Zone 4-8**
Extra-large

AURORA ™ - Latest ripening of all, extending the season well into the fall. It has very good flavor and a large fruit and is productive in large grapelike clusters. Fruit has excellent keeping qualities. Patented. **Zone 4-7**
Quart

SOUTHERN BLUEBERRIES

Vaccinium corymbosum x darrowii

Selected and developed for the South, due to their lower chill requirements and greater heat tolerance—yet able to fruit well in mild winter zones such as western Washington. Very ornamental and often evergreen, they offer more possibilities in the landscape. They also have a higher pH tolerance. Can be grown as a container plant.

Listed in order of ripening

Small Plug $10.00; 4" Pot $13.50;
Quart $18.00; Gallon $23.00

O'NEAL - Very early ripening of medium-large fruit. Among the best flavored of the southern highbush blueberry varieties. Gray-green foliage with red stems. Eventual height of 5-6 ft. From North Carolina. Self-fruitful. **Zone 5-9**
Plug

MISTY - Highly ornamental selection with blue-green leaves and pink flowers. Heavy yield of large to medium-large fruit of very good quality. Semi-evergreen in mild winter regions. To 6 ft. eventual height. From northern Florida. **Zone 7-10**
Gallon

EMERALD ™ - This evergreen blueberry produces the largest fruit of any Southern variety with a mildly sweet flavor. Round, spreading form to about 5 ft. A low chill requirement makes it suitable to warm regions from Patented. **Zone 8-10**
Quart $17.50; Gallon $23.00

SUNSHINE BLUE - A dwarfing evergreen blueberry to 3' height. Bright pink flowers in spring, followed by delicious fruit ripening over a 2 month period in midsummer. Low chill variety, tolerating high soil pH better than other varieties, yet well adapted to the Pacific Northwest. **Zone 5-10**
Quart; Gallon

EASTERN LOWBUSH BLUEBERRIES

Vaccinium angustifolium

Small Plug $6.00 • Liter $12.50
Quart $18.00 • Gallon $22.00

NORTHSKY - The hardiest cultivar with outstanding wild blueberry flavor. Similar to Northblue, but slightly smaller fruit on a shorter plant, getting only about 1ft. tall by 2-3ft. wide. **Zone 3-7**
Quart

TOP HAT - Great flavor. Dwarfing variety, about 18 in. tall and wide with pea-sized or larger fruit. Suitable for container growing, rock garden or any place with limited space. Very productive for its size. **Zone 3-8**
Liter

Gooseberry Bushes

Ribes

All gooseberry varieties listed here are resistant to white pine blister rust and mildew. **Self-fertile.**

Cannot ship *Ribes* to MA or NC

Medium $16.50 unless otherwise noted

AMISH RED - A new large-fruited, productive variety with flavorful, beautiful burgundy fruit. Annual growth is in a single flush in spring. Excellent disease resistance. **Zone 2-8**

HINNONMAKI RED - Large dessert berry of sweet, rich flavor. Very hardy and disease resistant. From Finland. **Zone 2-9**

JAHNS PRAIRIE - Big yields of large, dessert quality red-pink fruit in midsummer. One of the easiest varieties—with a fairly erect form—and resistance to rust, powdery mildew, leaf spot, grey mold, stem botrytis, aphids, and saw flies. From native populations in Alberta, Canada. Full sun but tolerates light shade. Self-fertile. **Zone 2-8**

JEANNE - Dark red fruits are medium sized and especially sweet and flavorful. Jeanne Gooseberry blooms and ripens late, and is very high yielding. Highly resistant to fungal disease. **Zone 3-7**
$18.50

INVICTA - Green, dessert-quality fruit. Highest rating for immunity to mildew and heavy yields of large fruit. **Zone 4-9**

WELCOME - Pinkish-red fruits are large, flavorful and productive. Nearly thornless. Good disease resistance. Hardy Minnesota selection. **Zone 2-7**

JOSTABERRY - Complex cross of North American coastal gooseberry, European black currant, and European improved gooseberry. Thornless, sprawling shrub producing dark fruits with a mild black currant flavor and firm gooseberry texture. Vigorous, productive and disease resistant. Early to leaf out and late to drop leaves that turn sunny yellow in fall, making it a great addition to a mixed hedgerow. Fruits favored by birds. **Zone 3-8**
Medium; Gallon $25.00; Extra-large $31.50

BLACK GOOSEBERRY SEEDLINGS *Ribes divericatum* - Tasty purplish-black fruit. Pacific Northwest native. Very thorny shrub grows to 5 ft. Sun or part shade, disease resistant. **Zone 4-8**
18-36" $9.25ea; 10+ $8.25ea

Goji Bushes

Lycium barbarum

Chinese shrub with small, purple-blue flowers and red fruits. Mildly sweet edible fruits can be eaten fresh or dried. This shrub is a sun lover, prefers well-drained soils, and is drought tolerant once established. While widely adapted it's found in alkaline soils with a pH of 8.

Goji has been called the most nutrient-dense substance known due to its high protein, B vitamin, amino acid, and mineral content. AKA Wolfberry.

Self-fertile. Can spread aggressively in some locations. **Zone 5-9**

Gallon Grown $32.50

CRIMSON STAR - Productive of large, flavorful fruit. This popular commercial variety from northern China is also known as Ningxia #1. Grows to about 8 ft. While widely adapted, it is tolerant of alkaline soils with a pH of 8. Self-fertile.
Gallon

PHOENIX TEARS - Most popular variety in the US. High yielding, especially nutritious and hardy selection with sweet red fruits and edible leaves when cooked. Self-fertile.
4" Pot $13.50

Currant Bushes

Ribes

Currant varieties listed here are resistant to mildew and white pine blister rust. **All are self-fertile.** See **page 36** for red-flowering currants

Cannot ship *Ribes* to MA or NC

Medium $16.00
Unless otherwise noted

BLACK CURRANTS

MINAJ SMYRIOU *Ribes nigrum* - Bulgarian variety with excellent European black currant flavor. Large, sweet berries are especially good for eating fresh, and used for jam and juice. Very productive. **Zone 3-8**

TITANIA *Ribes nigrum* **-** Large fruit of good quality. Quick to bear. Very vigorous grows up to 6 ft. Immune to white pine blister rust. **Zone 3-9**

CRANDALL *Ribes odoratum* - Large shiny black fruits are very aromatic and are excellent for jam or jelly, yet sweet enough to eat fresh. Crandall has a fruity grape like flavor—very good—but different from European black currants. Native to the Great Plains. Very hardy and disease resistant. Yellow flowers with clove fragrance are attractive in spring. Good fall color. **Zone 2-8**
Medium; Gallon Grown $25.00

JOSTABERRY - Complex cross of North American coastal gooseberry, European black currant, and European improved gooseberry. Thornless, sprawling shrub producing dark fruits with a mild black currant flavor and firm gooseberry texture. Vigorous, productive and disease resistant. Early to leaf out and late to drop leaves that turn sunny-yellow in fall, making it a great addition to a mixed hedgerow. Fruits favored by birds. **Zone 3-8**
Medium$16.50; Gallon Grown $25.00; Extra-large $31.50

RED CURRANTS

CHERRY *Ribes sativum* **-** Large, early ripening, flavorful fruit. Mildew resistant.
Zone 3-8
Medium

MINNESOTA 52 *Ribes rubrum* **-** Among the largest berries of any red currant. Ripens midseason. Very good fruit quality and disease resistance.
Zone 3-8

ROVADA *Ribes sativum* **-** Large, late, abundant, red fruits of excellent quality. Dutch origin, the main commercial European variety, well suited as an edible ornamental with long strings of ruby translucent berries. Strong upright branching, resists leaf spot, mildew, and white pine blister rust. Late blooming to escape spring frosts. Moist, neutral to acid soil, high organic matter, afternoon shade in hot climates. Fruits in sun or shade. 3-5'.
Zone 3-8

WHITE CURRANTS

WHITE IMPERIAL *Ribes sativum* **-** Beautiful, translucent white fruit. Sweet, high in vitamin C, flavorful, and productive. Compact bush. **Zone 3-8**

GOLDEN CURANTS

GOLDEN CURRANT *Ribes aureum* - Clusters of fragrant, bright yellow flowers in spring followed by sweet, juicy, large orange to burgundy berries. Fruit keeps up to 2 months on the bush. A vigorous, widely adapted shrub, grows to 9 ft. Native from NE to WA. **Zone 2-8**
2yr 18-36" $8.50, 10+ $7.50ea

Nitrogen-Fixing Shrubs

SIBERIAN PEA SHRUB *Caragana arborescens*
A perennial legume with abundant yellow flowers in late spring followed by small edible seeds. Young green seedpods can be eaten as a vegetable. By August the dried seedpods drop the small seeds, which are 36% protein and are used like peas or beans. Used in poultry yards as a source of feed, or as an impenetrable hedge plant as it is very thorny. Very winter hardy and drought tolerant once established. Nitrogen fixing plant. Requires a sunny, well drained location. Height up to 15 ft. but can be kept to any size with pruning. **Zone 2-9**
CANNOT SHIP TO MA
2-3' $6.75each, 10+ $5.75 ea, 100+ $5.00 ea

HARDY SILVERBERRY *Elaeagnus commutata*
A very tough, nitrogen fixing, deciduous shrub native to the Rocky Mountains and plains of Canada and the U.S. Related to autumn olive and goumi—and shares their ability to take nitrogen out of the air and put it into the ground—thus improving the soil. Suitable on reclamation sites and other poor or disturbed soils, or for use as a hedgerow or windbreak. Small fragrant yellow flowers followed by silvery foliage on reddish brown stems. Berries are dry and mealy. While edible, they are mostly consumed by birds.10-12' tall at maturity. Very hardy, drought tolerant once established. Also called wolf willow.
Zone 2-7
2-3', $9.25ea, 10+ $8.75ea, 100+ $8.25ea

SEABERRY BUSHES

Hippophae rhamnoides

Also known as sea buckthorn, this spiny ornamental shrub has large, bright orange, tart edible berries covering the branches in fall. Fruits are easily harvested and make a good jelly, sauce and a delicious juice. Excellent source of vitamin C, with other healing properties and industrial applications.

Drought tolerant and can grow on poor soils, improving them through nitrogen fixation. Good hedge plants. Gray-green leaves with silvery undersides. **Hardy to Zone 3. All named (female) cultivars need a male for pollination.**

Large (Field Grown) $26.75
Gallon Grown $31.00

GOLDEN SWEET ™ - Medium sized shrub with upright growth, 8-12 ft. Matures to bearing age a little later than others but has delicious, large, very sweet berries with yellow-orange tone.
Gallon Grown

ORANGE ENERGY® - Extremely fruitful and flavorful with exceptionally high levels of vitamins C and E. Also known as the variety 'Habego'.
Zone 3-8
Gallon Grown

SIROLA - Reddish-orange fruit in late summer. Productive of especially sweet fruit. **Zone 3-8**
Gallon Grown

MALE SEABERRY- A **pollinator** for all female seaberry varieties. One male can pollinate 6-8 females. **Zone 3-8**
Gallon Grown

SEABERRY SEEDLINGS - Plant two or more for pollination. Unsexed plants could be either male or female. It will take 4-6 years until the first flowering. Highly variable; can grow to 35 ft. but can be kept at 7 ft. tall by 5 ft. wide with pruning.
Zones 2-9
2-3' $6.50 each, 10+ $6.00ea, 100+ $5.50ea

AUTUMN OLIVE

Elaeagnus umbellata

Medium sized, nitrogen-fixing shrub with edible red berries in September. Not related to olive, but has similar-looking gray/green leaves. Contains very high levels of A, C, & E, flavonoids, essential fatty acids, a protein content of 4-5%, and other bioactive compounds. Berries are loaded with the antioxidant Lycopene, known to protect against cancer.

Millions of autumn olive seedlings were planted in the 1930's on mining reclamation soils and other poor or erosion-prone sites. Birds have spread the seeds widely so it's considered a weed in some areas. Usually self fertile, but cross pollination between 2 or more varieties may increase yields.
Zone 3-9

Cloned varieties grown from cuttings

Cannot ship to ME, MA, or NY

1-2' $22.00 • 2-3' $25.00

AMBER -Yellow fruited selection from Japan. Less attractive to birds, yet has the sweetest fruit. Plant with another variety as it may require cross-pollination.
1-2'

GARNET - A large fruited, sweet tasting selection. Similar to Ruby except darker and a week later ripening. Self-fertile.
1-2', 2-3'

RUBY - The largest fruited variety. High yielding of sweet flavorful berries. Self-fertile.
1-2'; 2-3' $5.75ea, 10+ $4.75ea, 100+ $4.50ea

BUFFALOBERRY

BUFFALOBERRY *Shepherdia argentea* **-** Widely adapted 6 ft. shrub native to the northern Great Plains. Small, tart, pleasant tasting red fruits can be eaten fresh, dried, or made into preserves. Very high in lycopene and other phenolic antioxidants. Tolerates extremes of cold, wind, drought, alkalinity, and poor soils, and fixes nitrogen. Silver-gray foliage, small yellow flowers, thorny branches. Seedlings can be either male or female; plant 2 or more for pollination. **Zone 2-7**
6-12" $3.25 each, 10+ $2.75ea, 100+ $2.25ea; 12-18" $5.25 each, 10+ $4.25ea, 100+ $3.75ea

RUSSET BUFFALOBERRY *Shepherdia canadensis* - Widely adapted shrub with small yellow flowers and juicy red berries. Unlike buffaloberry, this shrub is thornless but the berries, while edible, are more bitter. This species is native to WA along Puget Sound and is also found in coastal AK and Western BC, though it is more common in the Intermountain West. Also known as soapberry, fruits are traditionally used by native people in the preparation of *sxusem*, or "Indian ice cream." **Zone 2-7**
12-18" $5.75

GOUMI BUSHES

Elaeagnus multiflora

Medium-sized, nitrogen fixing, non-invasive shrub related to autumn olive but producing a larger fruit. Small, yellow, fragrant flowers in late spring followed by 3/4" long reddish orange tart fruits in early July, used in jams or pies, or eaten off the bush. Dark green deciduous leaves with silvery undersides. Sun or shade tolerant. Generally self-fruitful but cross pollination may increase yields.

Named varieties grown from cuttings

2-3' Bareroot 27.00 • Gallon Grown $32.00

CARMINE - Heavy yielding northwest variety, with superior fruit quality. The fruit has a pleasant, somewhat tart flavor with slight astringency when fully ripe. Fragrant dull yellow flowers cover the bush in March and draw many pollinators. Grows to about 15 ft. **Zone 5-9**
Gallon Grown

RED GEM - Hardy and especially productive selection from Siberia with bright red color. Flavorful, with a taste like pie cherries. **Zone 4-9**
2-3'

SUNRISE RUBY ™ - Large fruited, Korean variety. **Zone 5-9**
Gallon Grown $35.00

SWEET SCARLET - Large fruited and particularly sweet for a goumi. A flavorful, improved selection. **Zone 4-9**
Gallon Grown

FRUITING VINES

Grape Vines

Vitis

Listed in order of ripening
Certified virus free

Liner $12.50 • Large Liner $15.50 •
Medium $16.00 • Quart $20.00
Gallon $25.00
Extra-large Field Grown $26.00
Unless otherwise noted

SEEDED TABLE GRAPES

CONCORD - Classic American purple slipskin grape for fresh eating, jelly, and juice. Especially nutritious. Needs long, hot growing season.
Zone 4-9
Medium

VALIANT BLUE - Small, sweet, blue seeded grapes in compact clusters. Used for eating, juice and jelly. Incredibly hardy, to -50°F. Very early ripening. Makes a tasty dark red juice. Selected in South Dakota. **CAN'T SHIP TO CALIFORNIA.**
Zone 3-8
Liner; Quart; Gallon

SEEDLESS TABLE GRAPES

INTERLAKEN - White seedless dessert grape of exceptional flavor. Medium berries, loose clusters, earliest ripening. Makes great raisins. **Zone 5-10**
Liner, Large Liner; Quart

HIMROD - Nearly identical to Interlaken, but slightly larger and about a week later to ripen. Good keeper and the hardiest of the white seedless grapes.
CAN'T SHIP TO OR, CA, ID, NY.
Zone 5-10
Medium; Extra-large

CANADICE - Medium sized, seedless, sweet grapes in large, abundant clusters. The hardiest seedless red grape, to -25F°. **Zone 5-9**
Liner; Medium; Gallon

JUPITER - Dark blue to reddish blue seedless grapes in large clusters. Berries are firm and crisp. Ripens early with excellent flavor. Fairly large grapes with a muscat like flavor. Jupiter Seedless Grape has a fairly good disease resistance and skin is not likely to split under raining conditions. A recent University of Arkansas release. **Zone 5-9**
Quart

GLENORA BLACK - Dark blue seedless grape, with medium sized berries in large clusters. Delicate sweet flavor. Good disease resistance.
Zone 4-8
Liner

VANESSA - A good red seedless variety for short growing seasons. Medium sized, dark red, firm, fruity berries are split resistant in rainy climates. Produces an abundant sweet crop, even in cool regions. Originated in Vineland, Ontario. **Zone 4-9**
Liner; Quart; Gallon

WINE GRAPES

Medium (Self-Rooted) $16.00
Grafted $17.75 • Gallon (Self-Rooted) $25.00

LA CRESCENT WHITE - Amber grapes in loose clusters that have a high sugar and acid balance making for a high quality white wine. University of Minnesota selection hardy to -36° F. It has high acidity and is used to produce off-dry to sweet wines, typically with apricot, peach, and citrus characteristics, and is also used for dessert and late harvest wines.
Zone 3-8
Medium

LEON MILLOT - The earliest ripening red wine and juice grape. Berries and clusters are small, but still very productive. **Zone 4-9**
Grafted 3309C

MARQUETTE - makes excellent red wine or grape juice with a very high sugar content, ripening very early. This American hybrid is descended from Pinot Noir but is much more winter hardy, to -36° F. Is noted also for disease resistance to mildew and black rot. A patented University of Minnesota introduction.
Zone 5-8
Grafted 3309C

PINOT NOIR PRECOCE - Earliest ripening Pinot Noir type. Ripens in western Washington and other cool summer climate regions. Not quite the same quality of a true Pinot Noir, but close! Grafted onto rootstock for earlier ripening, greater winter hardiness, and phylloxera resistance. **Zone 5-9**
Grafted on 3309-C

PINOT NOIR NO. 71 - Classic red wine grape of Burgundy, France. Does best in Washington, Oregon, and Northern California. The earliest clone of the Pinot Noir with the potential to ripen in western Washington. **Zone 6-9**
Grafted on S04

SIEGERREBE - German variety with fragrant pink berries used primarily for wine, but good fresh as well. Low acid variety ripening early and well suited to cooler regions such as western Washington.
Zone 7-9
Grafted on 3309-C

MUSCAT OTTONEL - Yellow grapes in medium sized clusters with a wonderful, rich muscat flavor. Can be used for fresh eating and wine.
Zone 7-9
Grafted on 3309-C; Medium

FRONTENAC GRIS - Pink wine grape. An unusually hardy wine grape from the University of Minnesota. Produces good yields of large, loose clusters of pink grapes. Frontenac Gris Grape is known for making fine wine in Northern latitudes. Hardy to -38°F once established. **Zone 3-8**
Medium

Kiwi Vines

Actinidia

Small Cutting $15.00 • 4" Pot $19.00
Quart $21.00 • Medium $23.00
Large (Gallon Grown) $30.00

HARDY KIWI (KIWI BERRY) VINES

Actinidia arguta

Kiwi berries have a smooth skin that is edible and are even sweeter than fuzzy kiwis. Kiwi vines will tolerate part shade to full sun. They thrive for us in the Pacific Northwest and are extremely hardy, to **Zone 4.**

ANANASNAYA - Smaller fruits than fuzzy kiwi, but sweeter, smooth skinned and much earlier ripening. Produces fruit in large clusters. Vigorous growth, pretty, fragrant flowers. Sun or shade tolerant. **Pollinated by male** hardy kiwi, or male fuzzy kiwi. **Zone 4-9**
Quart; Gallon Grown

CHICO 74-49 - Medium sized, green, smooth skinned fruits separate easily from the stem. Ripens about a week earlier than Ananasnaya. **Pollinated by male** hardy kiwi. **Zone 4-9**
Gallon Grown

GENEVA - Very early ripening female hardy kiwi. Geneva is sweet and productive. **Zone 4-8**
Small Cutting

KEN'S RED *Actinidia arguta var. purpurea* **-** Large, smooth, red skinned, delicious fruit with red flesh. Latest ripening variety. **Pollinated by male** hardy kiwi. **Zone 5-9**
Gallon Grown; Extra-large $31.50

ISSAI - Japanese self-fertile kiwi. 1½" long fruits, smooth skinned, very sweet, precocious. Less vigorous than other kiwi so it is easily grown in pot. Considered **self-fertile** but much higher yielding when pollinated by a male hardy or fuzzy kiwi. Bears quickly. **Zone 6-10**
4" Pot; Gallon Grown

ROSSANA - Produces large, richly flavored sweet, smooth skinned fruit - up to a half ounce each. Elongated fruit is green with a red blush if grown in sun. An Italian selection. **Zone 4-9**
Gallon Grown

MALE HARDY KIWI - Vigorous hardy kiwi vine that produces only male flowers. **Pollinates female kiwis,** including Ananasnaya, Chico 74-49, Issai, Ken's Red, Rossana. 1 needed per 8 females.
Zone 4-9
Gallon Grown

FUZZY KIWI VINES
Actinidia deliciosa

These vines have fuzzy leaves and stems and produce familiar large, fuzzy fruits. **Hardy to Zone 7.**

HAYWARD - Beautiful, vigorous climbing vine, producing the same fruit found in grocery stores. Established vines are hardy to about -2° F. Very productive, good keeper. **Pollinated by male** fuzzy kiwi. **Zone 7-9**
Gallon Grown

JENNY - Reputed to be a **self-fruitful** vine, with large, fuzzy brown-skinned fruit and green flesh. Vigorous vine with big, attractive heart-shaped leaves. Yield increases with a male vine. Low chill variety suited to warm winter regions. **Zone 7-10**
Gallon Grown

SAANICHTON - Similar fruit to Hayward, but has fruited well on Vancouver Island, B.C. Canada, where Hayward has frozen out. **Pollinated by male** fuzzy kiwi. **Zone 7-9**
Gallon Grown

MALE FUZZY KIWI - Pollinator. 1 needed per 8 females. Pollinates Hayward, Saanichton, and Jenny, as well female hardy kiwi (*Actinidia arguta*) varieties. **Zone 7-9**
Gallon Grown

ARCTIC BEAUTY KIWI VINES
Actinidia kolomikta

The most winter-hardy kiwi vine, to -40° F, although it can be tender in spring if an early warm spell brings it out of dormancy prematurely. Best in shade to part sun, and full sun in the Pacific Northwest. **Zone 3-8**

SENTYABRASKAYA - This is among the latest ripening of the Arctic Beauty varieties, ripens late August to early September, several weeks before the *A. arguta* hardy kiwi. Fruit has good size, sweetness and yield. This female variety has multi-colored ornamental foliage equal to the male vine. Extremely ornamental foliage, green heart shaped leaves with pink & white variegations. Does best in shade to part sun. Also known as September Sun™.
Gallon Grown

ARCTIC BEAUTY MALE - Ornamental foliage, with green heart shaped leaves. Very cold hardy. **Pollinator for Sentyabraskaya** female kiwi.
Gallon Grown

Chinese Magnolia Vine

Schisandra chinensis

EASTERN PRINCE - Self fertile cloned selection. Vigorous and productive, with large fruit. Shade tolerant vine with small, magnolia like, fragrant white flowers. Tart red fruits are called "five-flavor berry" for the unusual combination of flavors, and can be dried, juiced, or eaten fresh. Used for tea in Japan where it is known as "omija," and in Korea where it is called "gomishi." **Zone 4-9**
Medium $17.00; Gallon $35.00

CANE FRUITS

Blackberries

Rubus

Cannot ship blackberry plants to CA

2yr Bareroot $14.50 • Gallon $18.50
Unless otherwise noted

THORNY BLACKBERRIES

MARIONBERRY - The standard of excellence in blackberries. Productive, large, delicious fruit on vigorous trailing, canes up to 20 ft. Flavor is earthy, rich and complex. Especially adapted to western Washington and Oregon, but may not do well elsewhere. Resistant to a new strain of blackberry rust spreading in the Northwest. **Zone 6-9**
2yr

THORNLESS BLACKBERRIES

BLACK DIAMOND - Marionberry flavor on high yielding thornless canes. Berries are larger and firmer than marionberry, and produce for about a month in July and August. Disease resistant and about 10° hardier than the original Marionberry.
Zone 6-9
2yr

COLUMBIA STAR - Vigorous, large fruit that is firm, very uniform shape, and has outstanding flavor and processing quality. High yielding. One of the newest thornless and trailing varieties to have Marionberry-or-better flavor. **Zone 6-9**
2yr

TRIPLE CROWN - The most productive thornless blackberry, with large sweet fruit. Extremely vigorous. Canes are semi-erect and need some support.
Zone 5-9
2yr; Gallon

Raspberries

Rubus idaeus

Normally planted 18-24 inches apart in rows and supported by a two wire trellis. Everbearing varieties can be grown freestanding.

Bundle of 5 for $25.00 • 25 for $100.00

SUMMER-BEARING RASPBERRIES

PRELUDE - The earliest ripening red raspberry with a really good flavor, ripe starting around mid June in the north. A lighter crop is also produced in the fall. Berries are large, round, and firm on vigorous cane. Geneva, NY selection. **Zone 4-8**

EVERBEARING RASPBERRIES

ANNE - Wonderful, large, sweet-flavored, firm yellow raspberry, with a hint of apricot flavor. Plant crowns 3 feet apart. **Zone 4-9**

CAROLINE - Everbearing variety with an abundant yield of large firm fruit with a tangy, unique flavor. Widely adapted, as far north as Wisconsin, yet also grown in the South. It has the highest levels of antioxidants and other nutrients of any raspberry variety. **Zone 4-7**

HIMBO TOP ™ - Huge red raspberries with good flavor and firmness. They are easy to pick with the highest yields of any variety. Everbearing producer of red raspberries. Canes are extremely vigorous, and resistant to phytophthora root rot. Originated in Switzerland as a cross between Autumn Bliss and Himbo Queen. Patented Rafzaqu variety. **Zone 4-8**
Bundle of 5 $26.00, Bundle of 25 $105

JOAN J - Great flavored, big, firm, red berries. Everbearing and very productive through August-September. Thornless canes. Patented. **Zone 4-8**
Bundle of 5 $26.00, Bundle of 25 $105

POLANA - Highly productive and early ripening everbearing red raspberry with its main crop in late July and August in the north until hard frost or incessant rain. Flavorful medium to large red fruit. Polish origin. **Zone 3-8**

OTHER RASPBERRIES

BLACK CAP RASPBERRY *R. leucodermis* - Purple-blue thorny canes with greyish cast are the reason for the latin name—leucodermis means "white bark". Long arching canes produce sweet black fruits on 2nd year wood, then die back. Hardy and widely adapted to sun or partial shade, but prefers moist soils. This Black Cap Raspberry species is native from CA to B.C., throughout WA, ID, MT. WY and UT. Not to be confused with the East Coast native black cap raspberry, *R. occidentalis*.
Zone 6-9
1-2 ft $8.75

GROUNDCOVER RASPBERRY

Rubus pentalobus

EMERALD CARPET - Fast growing evergreen groundcover raspberry native to the mountains of Taiwan. Small, yellow-orange berries are ripe in mid summer and taste good. Grows in sun or shade. It's tough and drought tolerant once established. The broad leathery dark green evergreen leaves make a good ground cover for weed suppression and soil stabilization. **Zone 6-10**
4" Pot $9.50

FRUITING GROUNDCOVERS

BERRIED TREASURE™ BOX HUCKLEBERRY *Gaylussucia Brachycera* **-** A low spreading shrubby groundcover distantly related to blueberries with somewhat similarly sweet fruit. It is able to bear under shady conditions. Self-pollinating. Prefers acidic soils. Only about a foot tall, it spreads wide over time. Pink flowers in June. Late summer ripening, leaves turning dark red in autumn. Native to Eastern North America. **Zone 4-9**
Gallon $30.00

KORALLE LINGONBERRY *Vaccinium vitus-idaea* Pink flowers with bright red berries in mid-summer, blooms again in summer for a fall crop. The small tart berries are produced in clusters and can be eaten fresh or made into delicious jam. Koralle lingonberry is a spreading evergreen groundcover that needs an acidic soil. Grows in sun to part shade. **Zone 2-8**
Liner $10.00

CHERRY BERRY WINTERGREEN *Gaultheria procumbens* - Low growing, spreading and rambling evergreen ground cover with fleshy stems, coin-shaped leathery leaves and small pinkish-white, bell-like flowers in late spring. Evergreen leaves turn dark red in autumn. Edible red berries are unusually large and prolific. Fruits ripen late summer and taste similar to wintergreen mint candy. Leaves filled with essential oils can make a refreshing tea. **Zone 3-8**
Liner $10.00

Strawberry Plants

Fragaria

Strawberries need an acidic soil pH of 5.5 - 6.5 to be productive. Soak roots in water before planting.

25 for $19.50

JUNE-BEARING

HOOD - Outstanding sweet flavor, considered the best in the Northwest for jam or preserves, and great for fresh eating as well. Large dark red fruits are June ripening. Resistance to mildew, red stele and root rot disease, but not particularly hardy in cold winter regions. **Zone 6-10**

FINNITO - June bearer, ripens just after Mary's Peak. Nice big berries are deep red with a great sweet flavor. "Finnito" commemorates Chad Finn, the breeder of this variety at OSU. It's similar to Hood but firmer, keeps longer and the berries are more tolerant of extreme heat or rain. **Zone 4-9**

MARY'S PEAK™ - June-bearer—all fruit comes within a 3 week window. Among the latest ripening of the major commercial varieties. Excellent flavor with large size, high yield, firmness, and color along with a low incidence of rot. Lots of runners for plant production. **Zone 6-10**
$18.50

SHUKSAN - Late June ripening. Large, sweet fruits used fresh and in jams and are especially good for freezing. This is our most widely adapted variety, not requiring acidic soils, tolerating poor drainage, and known for extreme winter hardiness and good disease resistance. **Zone 4-10**

SWEET SUNRISE - Large firm berries, exceptionally sweet and flavorful and solid red throughout. Our earliest ripening June bearing variety, known for very high yields on vigorous plants. **Zone 5-9**

TILLAMOOK - June bearer with exceptionally large fruit and the unusual trait of maintaining very large size during their 2nd and 3rd picking. **Zone 6-10**

EVERBEARING

ALBION - Long fruiting season with large fruit. Best flavored of the large-fruited everbearing types. Very good disease resistance to phytophthora, verticillium, and anthracnose. **Zone 5-9**

BEAUTY - Our earliest ripening everbearing variety with medium to large sized bright red, heart shaped fruit. Beauty Everbearing strawberry are firm, rain tolerant and very flavorful. Phytopthora resistant. **Zone 6-10**

SEASCAPE - Highly productive everbearing variety with very large delicious berries, solid red inside and out. Berries are firm and very flavorful. Widely adapted and disease resistant. **Zone 5-10**

NUT TREES

Hazelnut Trees

Corylus

Also known as filberts. Can be grown as a tree by suppressing suckers, or as a naturally multi-stemmed shrub. Growing hazelnuts as a shrub makes it easier to hand-harvest nuts as soon as they ripen, as they are ripe nearly a month before they drop. This may be necessary where jays and squirrels are common.

Plant 2 or more varieties for cross pollination.

CANNOT SHIP ANY HAZELNUT SPECIES TO OREGON

EUROPEAN HAZELNUTS

Corylus avellana

Self-rooted (Layer) $26.00 unless otherwise noted
$1.00 added for patented varieties

DORRIS - Oregon State University variety with resistance to Eastern Filbert Blight. A fairly large, round nut, useful for inshell marketing or processing. The kernel quality is such that it will command a premium price. The flavor is exceptionally good. It blanches well and has very few blank, defective or moldy kernels. A naturally small tree, only 10-12 feet, yet as productive as a Barcelona twice its size. Pollinates with all listed varieties except Barcelona. **Zone 4-9**

FELIX - Late season pollinator variety, compatible with all other varieties. Primarily used to pollinate early blossoms of the very late blooming Jefferson. Felix nuts are of good quality and they blanch easily. Trees are vigorous and have blight resistance. This variety is named after Felix Gillet, a founding father of nut tree orcharding on the Pacific coast. Patented. **Zone 4-8**
Self-rooted $27.00

JEFFERSON - OSU release with resistance to Eastern Filbert Blight and highly resistant to big bud mite. Heavy yield of large, flavorful nuts that fill their shells well. Similar to Barcelona, but with fewer blanks and a low incidence of shriveled kernels and moldy nuts. A late bloomer over a long receptive period. Commercial orchardists are using Felix or Yamhill to pollinate at the beginning of its receptive period, and Eta and or Theta to cover the late blooming period, to ensure maximum potential yield. **Zone 3-8**
Seedlings: 1-2' $7.00, 2-3' $8.50; Self-rooted $26.00

MCDONALD - Blight resistant OSU release. Medium-sized kernels, good quality with the highest nut meat to shell ratio. Earliest ripening. Pollinates with Wepster, Felix, York, Dorris, Poly O, and Yamhill. Patented. **Zone 5-9**
Self-rooted $27.00

THETA - Blight resistant release from OSU. Late pollinator for Jefferson. Since Jefferson's long bloom period extends late into spring, the male flowers of Theta will increase yields for Jefferson especially when used with other varieties such as Felix, Yamhill, Eta or York. Medium-sized nuts. **Zone 5-9**

TONDA DI GIFFONI - Leading Italian variety, commanding a premium price due to its outstanding flavor and ability to blanch perfectly. Medium-sized round nuts. Productive, blight and mite resistant. Pollinator for all varieties but Barcelona and Jefferson. **Zone 5-8**

YAMHILL - High resistance to Eastern Filbert Blight. Short, spreading tree. Very productive of small round, thin shelled nuts, early ripening with great kernel quality. Pollinates with all varieties. **Zone 4-8**
Seedlings: 2-3' $8.50, 3-4' $11.00; Self-rooted

HALLES GIANT - Hardy, northern German origin, considered a suitable pollinator for any other hazelnut variety. Large attractive nut of good quality. Moderate resistance to Eastern Filbert Blight. **Zone 4-8**
Seedlings: 1yr $5.00, 1-2'$7.00, 2-3' $8.50; Self-rooted

HAZELNUT VARIETIES FOR THE EASTERN UNITED STATES

Corylus avellana

These varieties were selected for resistance to multiple strains of Eastern Filbert Blight (EFB), a disease found in the eastern and central U.S. where bush hazel (*Corylus americana*) grows.

Plant 2 or more varieties for cross pollination.

Self-rooted (Field Grown) $30.00

GRAND TRAVERSE *Corylus avellana x colurna* A widely adapted, hardy, Michigan selection considered a near universal pollinator variety. Good sized, relatively thin shelled, flavorful nuts with clear kernels. Very tolerant of multiple strains of EFB. Pollinates with The Beast. **Zone 5-8**
Self-rooted (field grown)

THE BEAST™ *Corylus avellana x americana* Newly released variety from New Jersey with resistance to multiple strains of EFB. Very vigorous selection, high yielding of good quality round nuts for the kernel market. Hardy variety best suited to Eastern and Midwest states. Pollinates best with Grand Traverse. **Zone 5-8**
Self-rooted (field grown)

OTHER SPECIES OF HAZELNUT

BEAKED HAZEL *Corylus cornuta* - PNW native hazel. Small, thick shelled nuts enclosed in a bristly husk. Shy bearing. Late flowering, early ripening, and blight immune. **Zone 4-8**
2-3' $8.50

PEACE RIVER SEEDLING *Corylus cornuta x avellana* - This Canadian variety is among the hardiest strain of hazelnut. Peace River Hazelnut is an excellent choice for cold areas with a short growing season. **Zone 3-8**
2-3' $8.50; 3-4' $11.00

TURKISH TREE HAZEL *Corylus colurna* Upright pyramidal form, 25 x 70 ft. Small, good tasting nuts with up to eight per cluster. Very winter hardy and disease resistant. Drought tolerant once established. Beautiful wood; attractive, corky bark. Makes a good windbreak tree. Plant two or more for cross-pollination. **Zone 4-9**
1-2' $10.00

Chestnut Trees

Castanea

Majestic trees, capable of producing large quantities of delicious nuts every year. They bloom in early summer and ripen in early fall inside prickly husks that are squirrel-proof until they fall ripe from the trees. Chestnuts like a sunny location with good drainage and prefer acidic soils.

Chestnuts need cross-pollination between at least two pollen-producing trees. **Plant at least two different good pollinators for nuts. Grafted sterile varieties do not produce pollen,** and need to be pollinated by another variety that produces pollen.

If planting a grafted sterile variety, plant at least two other pollinator varieties to ensure good nut production.

Seedlings: Small 1yr $5.00 • 1-2' $7.00
2-3' $8.50 • 3-4' $11.00 • 4-5' $16.00
5-6' $20.00 • 6-8' $40.00

Small Grafted 1-2' $25.00 • Grafted 2-4' $35.00
Large Grafted 4-6' $40.00

Layer (Self-rooted): Priced as marked unless otherwise noted

AMERICAN CHESTNUT *Castanea dentata* **-** Was the dominant species in the broadleaf forests along the Appalachian Range. The best timber form with small, easy to peel, sweet nuts. Hardiest chestnut if blight is not a problem. **Zone 4-8**
Seedlings: 1yr $9.00, 1-2' $12.00, 2-3' $15.00

CHINESE CHESTNUT *Castanea mollissima* Smaller, rounded tree. **Highly blight resistant,** fine quality, easy peeling, sweet nuts. Recommended for eastern U.S. where chestnut blight is widespread and the growing season is hot and humid. **Zone 4-8**
Seedlings: 1-2' $7.00, 2-3' $9.00

EUROPEAN CHESTNUTS

Castanea sativa

Chestnuts have been grown in Europe for centuries, from the Mediterranean to Central and Eastern Europe. Celebrated for their flavor and nutritional qualities, roasted chestnuts are commonly sold by street vendors in the fall, especially in Spain, Italy, and France. Pure European chestnuts are **blight susceptible** and are only recommended for the western U.S. where blight does not occur.

BRACALLA - Italian variety with very large nuts. Late ripening, yet fills well in our cool climate. **Poor pollen producer. Zone 5-8**
Seedlings: 1yr, 1-2', 2-3'

EUROPEAN CHESTNUT - Medium to large, good quality nuts. Selected from highly productive parents. Large, timber quality trees. Blight susceptible. **Zone 5-9**
Seedlings: 1-2', 2-3'

JUDIA - Very late ripening, large nuts of excellent quality. High yield and falls free from the burrs. Judia Chestnut is not a good pollen producer. Portuguese Origin. **Zone 5-8**
Grafted

NEVADA - Produces a medium-sized nut that ripens several weeks after Colossal. **Good pollinator**; paired with Colossal in commercial plantings. Not blight resistant. **Zone 4-8**
Seedlings: 1yr, 1-2'; Grafted 2-4', Large Grafted 4-6'; Layer, Large Layer

MARRON COMBALLE - French variety with medium to large, easy peeling nuts with a single kernel within a shell. Mid to late season ripening chestnut. **Zone 4-8**
Seedlings: 1yr, 1-2', 2-3', 3-4'; Small Grafted

MARRON DI GOUJOUNAC - Has a single embryo, producing one large rounded kernel. Nut is ideal for processing. Very few blanks or splits and a good pollinator. French origin. **Zone 5-9**
Seedlings: 1yr, 1-2', 2-3', 3-4'; Small Grafted

MARRON DI VAL DI SUSA - Large, sweet, easy -peeling variety from Northern Italy. Plump, rounded nuts. Ripens well in cool Northern regions despite it being a late ripener. Burrs often drop before opening. **Pollen producer. Zone 4-8**
Seedlings: 1yr, 1-2', 2-3'; Small Grafted, Grafted; Large Grafted

MARRON DU VAR - An easy peeling, very sweet French variety. Very late ripening. **Zone 5-8**
Seedlings: 1yr, 1-2'

JAPANESE CHESTNUTS

Castanea crenata

Japanese chestnuts are **highly resistant to chestnut blight** and produce large, flavorful nuts. Known as *kuri*, they have been an important food since before the advent of rice.

JAPANESE CHESTNUT SEEDLINGS - A vigorous growing tree with large nuts. Japanese Chestnuts have good blight resistance. **Zone 4-8**
1yr, 1-2'; Small Grafted, Large Grafted

TANZAWA - Large, sweet nut. **Blight resistant.** One of the top commercial varieties grown in Japan. Grafted trees are scant pollen producers; seedlings are typically better pollinators. **Zone 4-8**
Seedlings: 1 yr, 1-2', 2-3'; Small Grafted, Grafted 2-4'

TSUKUBA - Midseason ripening Japanese selection with large yellow kernels and a low rate of doubles. Scant pollen producer. Upright growing tree and produces a crop that is known for its keeping quality. **Zone 4-8**
Seedlings: 1 yr, 1-2', 2-3'; Small Grafted, Grafted 2-4'

HYBRID CHESTNUTS

Castanea x

These selections are hybrids between two or more chestnut species. They combine some of the best qualities of European chestnuts, such as flavor and ease of peeling, with the higher **blight resistance** of Japanese or Chinese chestnuts. They can be grown in the eastern U.S. where blight makes pure European or American chestnuts unfeasible, and are ideal for commercial production.

BELLE EPINE *Castanea sativa x crenata* **-** Very high quality, reddish-brown nuts are late ripening, yet do ripen sufficiently here in the Northern edge of chestnut culture. Good disease resistance and make an **excellent pollinator.** In the North, nuts come down still in the protective husk. **Zone 4-8**
Seedlings: 1 yr, 1-2', 2-3'; Small Grafted, Grafted 2-4'

BERGANTZ *Castanea sativa x crenata* - Selected as a seedling of Colossal. Very good flavor, large nuts and is easy to peel. **Pollen sterile.**
Seedlings: 1 yr, 1-2', 2-3', 3-4'; Small Grafted, Grafted

BISALTA #2 *Castanea sativa x crenata* - Italian Selection of European chestnut crossed with Japanese chestnut, yielding large nuts.
Zone 4-9
Grafted 2-4'

BISALTA #3 *Castanea sativa x crenata* **-** Nuts can be very large, however, overbearing can result in up to 6 nuts per bur with mid sized nuts. A vigorous tree with good flavor nuts. **Pollen sterile.** Resists blight European-Japanese cultivar. **Zone 4-8**
Seedlings: 1 yr, 1-2', 2-3'

BOUCHE DE BETIZAC *Castanea sativa x crenata* Vigorous, upright tree with easy peeling, very large nuts. Widely adapted tree, resistant to blight and phytophthora root rot and gall wasp. French selection.
Pollen sterile. Zone 4-8
Seedlings: 1 yr, 1-2', 2-3', 3-4'; Grafted 2-4'; Large Grafted

COLOSSAL *Castanea sativa x crenata* - Exceptionally big nuts of good quality. Very productive. Early ripening, popular orchard variety. **Pollen sterile.** Best in warm summer regions. **Zone 4-8**
Seedlings: 1 yr, 1-2', 2-3'; Small Grafted, Grafted 2-4', Large Grafted; Layered: 1-2' $20.00, 2-3' $25.00, 3-4' $30.00, 4-5' $35.00, 5-6' $40.00

GILLET *Castanea crenata x* - Very large marron-type nuts that are good flavored, keep well, and ripen midseason. Compact tree is hardy to at least -20º F. **Good pollinator.** Originally a seedling planted by Bob Bergantz. Discovered and named by Michael Nave after Felix Gillet, pioneer nut tree nurseryman.
Zone 5-9
Seedlings: 1 yr; Small Grafted

LAYEROKA *Castanea mollissima x sativa* **-** Early ripening variety. Heavy yield of medium to large, sweet nuts. Precocious, vigorous tree, erect timber form, very winter hardy, blight resistant. **Pollen sterile**. **Zone 4-8**
Seedlings: 1 yr, 1-2; Small Grafted

MARAVAL *Castanea sativa x crenata* **-** Very large nuts, late ripening. Resistant to blight and phytoptho-ra root rot. **A pollinator. Zone 4-8**
Seedlings: 1 yr, 1-2', 2-3', 3-4'

MARIGOULE *Castanea sativa x crenata* Vigorous, dual-purpose tree with large, sweet nuts and good timber form. Blight and root rot resistant. **Good pollen producer**. Japanese-European hybrid. **Zone 4-8**
Seedlings: 1 yr, 1-2', 2-3'; Grafted; Layer $40.00

MARRISARD *Castanea sativa x crenata* **-** Very large nuts, good flavor and peeling quality. Especially good in hot climates, where it produces nuts larger than Colossal. **Pollen sterile,** late ripening. Very resistant to blight and phytophthora.
Zone 4-8
Seedlings: 1 yr, 1-2', 2-3', 3-4'

OKEI *Castanea sativa x crenata* - Very large, round, orange-brown nuts are larger than Colossal and ripen 2 weeks later. A **good pollinator** for other varieties, and a good choice if blight is likely to be a problem. Nuts of average quality; some tendency to split. Not a heavy yielder. **Zone 4-8**
Small Grafted, Layer $40.00, Large Layer $45.00

PRECOCE MIGOULE *Castanea sativa x crenata* Among the earliest ripening varieties. Very dependable producer in cool regions. Large nuts of good flavor on a vigorous, upright tree. **Good pollinator** for Colossal and others. Blight resistant. European-Japanese hybrid. **Zone 4-8**
Seedlings: 1 yr, 1-2', 2-3'; Grafted; Large Grafted

PRIMATO *Castanea sativa x crenata* **-** Our earliest ripening grafted variety. **Good pollinator**, and may be self pollinating. Smaller crown and less vigor. **Zone 5-8**
Seedlings: 1 yr, 1-2', 2-3'; Small Grafted

SKIOKA *Castanea mollissima x sativa* **-** Similar in tree form and overall nut quality to Layeroka, but less productive. **A good pollinator,** nuts ripening a little later with some remaining in the husk. Parent of Layeroka and Skookum. **Zone 4-8**
Seedlings: 1 yr, 1-2', 2-3', 3-4'; Small Grafted

SILVERLEAF (AKA Eurobella) *Castanea sativa x crenata* - Narrow upright tree is an **excellent pollen producer** for Colossal and others. Productive of good sized, sweet, easy peeling nuts. Widely adapted and blight resistant. **Zone 4-8**
Seedlings: 1 yr, 1-2', 2-3', 3-4'; Small Grafted, Grafted

SLEEPING GIANT *Castanea dentata x mollissima x crenata* **-** An American chestnut crossed with Japanese and Chinese to create a blight resistant timber tree with large nuts. **Zone 4-8**
Small Grafted, Grafted 2-4', Large Grafted

TORAKURI *Castanea crenata x* **-** Very large nuts that peel easily. A J.M Nave selection. Good source of pollen. **Zone 4-8**
Small Grafted, Grafted

WHITTEN NORTH *Castanea sativa x dentata* **-** Medium large nuts that are slightly later ripening than Whitten South, and more irregularly shaped, but with an exceptional flavor. Large spreading productive tree. Very dependable in cooler summer regions, but not for blight-infected areas. **Zone 5-8**
Seedlings: 1yr, 1-2', 2-3', 3-4'

WHITTEN SOUTH *Castanea sativa x dentata***-** This rediscovered variety is from the Whitten homestead in Thurston County, WA. Large, sweet, flavorful nut. Easy to peel. Parent tree is very large, spreading and productive. It produces well from seed. Very dependable in cooler summer regions, ripening a few days earlier than its partner, Whitten North.
Zone 5-8
Seedlings: 1yr, 1-2', 3-4'

Seeds for these chestnut varieties, and many other trees are available for purchase.

See page 37 *for details*

Chestnut scionwood is available for purchase.

Availability is listed on our website. Named chestnut varieties should ideally be grafted to seedlings from the same variety.

Scionwood is sold by the foot.
$5.00 per foot

Scionwood orders are shipped separately by UPS 2nd Day Air and handling is $17.50 for up to 35 sticks

English (Persian) Walnut Trees

Juglans regia

Mild tasting, thin-shelled nuts that are very easy to crack. English (Persian) walnuts have been enjoyed for generations. Excellent raw, roasted, and for baking. Strong, beautiful wood is used for furniture, paneling, and gun stocks.

Self-fertile, but they will set a larger crop if you plant 2 seedlings

Cannot ship to AZ, CA, MO, NE, OR, IN, KS, MI, MN

HOWARD - Medium-large, plump, light-colored kernels of very good quality. Well sealed shell, yet easy to crack. Late leafing and flowering to help escape spring frosts. Self-fruitful and productive. Tree is small for a walnut, so they can be planted 20 ft. apart. **Zone 6-9**
Seedlings: 1yr $10.00, 1-2' $13.00, 3-4' $32.00

Black Walnut Trees

Juglans nigra

Cannot ship to AZ, CA, MO, NE, OR, IN, KS, MI, MN

BLACK WALNUT SEEDLINGS - Highly valuable for its wood. Nuts are richly flavored, thick-shelled, and have notably high protein content.
Zone 4-8
1-2ft $4.00; 2-3' $7.50ea, 10+ $7.00ea; 3-5' $15.00

SEEDLINGS OF SUPERIOR VARIETIES:

Small 1yr $8.00 • 1-2' $10.00
2-3' $12.00 • 3-4' $15.00

HARE - A large nut with a big, well-filled kernel that cracks well for a black walnut. Late blooming, good yielding variety. **Zone 4-8**
1-2', 2-3'

HAYS - Nebraska selection with a plump kernel and relatively thin shell (for a black walnut).
Zone 4-8
1-2'

ROWHER - Good size nuts with plump kernels. An excellent quality Iowa selection. **Zone 4-9**
1-2', 2-3'

SPARROW - Especially flavorful variety with medium-sized nuts that have very good cracking quality. Quick to bear, early ripening, dependable producer, Illinois origin. **Zone 4-9**
2-3' 3-4'

TIMBER - This variety grows with amazing speed once established, up to 5-6 ft. a year. Beautiful upright form with timber harvest age in half the time that a typical black walnut tree would take to reach sawlog size. Very productive of small-sized, thick shelled nuts. **Zone 4-9**
1-2', 2-3' 3-4'

Butternut Trees

Juglans cinera

Cannot ship to MO, NE, IN, KS, MI

BUTTERNUT SEEDLINGS - Hardiest of the walnut family. Late leafing, producing thick-shelled nuts of rich distinctive flavor. Beautiful wood.
Zone 3-9
24-36" $11.00; 3-4' $15.00; 4-6' $26.75

CHAMBERLAIN BUTTERNUT - This selection is resistant to butternut canker. Chamberlain is a cross of Butternut x Heartnut. **Zone 3-9**
2-3' $14.00, 3-4' $20.00, 4-5' $25.00

G BUSH BUTTERNUT - The historic G. Bush Butternut Tree was brought from Missouri to Tumwater ,WA in a wagon by a free black man named George Bush in 1845**,** eventually growing to be the largest specimen of the species. Although the landmark tree fell down in 2021, its legacy lives on through our propagation of seedlings from the original tree. **Zone 3-9**
Seedlings: 1-2' $12.00, 2-3' $14.00, 3-4' $20.00, 4-5' $26.75, 5-6' $30.00

Heartnut Trees

Juglans ailantifolia

Cannot ship to MO, NE, IN, KS, MI, MN

HEARTNUT SEEDLINGS - Thick-shelled but easily crackable, heart-shaped nuts that are sweet and mild. Fast growing trees with huge compound leaves. Also known as Japanese Walnuts, beautiful and hardy trees. **Zone 5-9**
3-4' $20.00; 4-5' $26.75; 5-6' $30.00

Almond Trees

Prunus dulcis

These varieties bloom late to help escape spring frosts. Almonds will work best in sunny, dry location or reasonably well drained soils. **Zone 5-9**

ALENIA - Very hardy, late blooming, thin-shelled variety with sweet flavor. Productive and reliable. Needs another late blooming variety to pollinate, such as Dessertiny, or All-in-One.
Gallon Grown $32.50

DESSERTNIY - A true almond with a non-bitter kernel and high yield. Needs another late blooming variety to pollinate, such as Alenia or All-in-One.
Gallon Grown $32.50

ALL-IN-ONE - First self-fertile true almond variety. Thin-shelled, sweet nuts. May need antifungal spray in wet climates due to susceptibility to disease.
Standard $36.00

Hickory Trees

Carya ovata

CAMPBELL SHELLBARK - Medium large nut with a relatively thin shell. Great flavor. Selected in Ontario, Canada.
1yr $9.00

FAYETTE SHELLBARK- Parent tree ripens early. Large, thin shelled nut (for a hickory). PA origin from Fayette Etter.
1yr $9.00

NEILSON SHAGBARK- Produces an early ripening crop with large nuts that fill their shell well. High yielding selection. **Zone 3-8**
1yr $9.00

YODER SHAGBARK- High yielding selection from Ohio. For a hickory, it is relatively easy cracking and quick to bear. Exceptionally fine flavor.
Zone 3-8
1yr $9.00

SHAGBARK HICKORY SEEDLINGS *Carya ovata* - Large tree with dense, tough, useful wood. Small, thick shelled nuts of outstanding flavor, with a taste comparable to the best pecan. Ripens in cool northern regions such as western Washington. Beautiful yellow fall color. **Zone 3-8**
1-2' $11.00; 2-3' (2yr) $14.00

SHELLBARK HICKORY SEEDLINGS *Carya laciniosa* **-** Large, flavorful, thick shelled nuts. Hard, useful wood. Trees can tolerate some seasonal flooding. Yellow fall color. **Zone 4-9**
1yr $9.00

Ginkgo Trees

Ginkgo biloba

The oldest broad-leafed tree on earth. Today's gingkos look identical to fossils from 150 million years ago. More closely related to conifers than broadleaf trees. Fan-shaped "leaves" turn brilliant yellow in fall. When cross-pollinated, they produce edible nuts. Nuts and leaves are prized both as a food and medicine. **Zone 3-9**

Plant male and female grafted trees, or two or more seedlings for nuts

Grafted $40.00 • Large Grafted $51.50

MALE GINKGO TREES

JADE BUTTERFLY - Bright green leaves are unusually large on this grafted male variety. Beautiful scalloped leaf edges. The pretty leaves are reminiscent of a flock of jade-colored butterflies.
Grafted

SKY TOWER - Slow growing grafted male, narrow, upright to 20' like an exclamation point in the landscape! Symmetrical, short branching. Deciduous with unusual 2-lobed flat leaves that drop all at once giving the impression of a golden carpet.
Large Grafted

FEMALE GINKGO TREES

When pollinated by a male ginkgo, produces Almond-sized, orange nuts in a thin shell. Nuts are roasted or stir-fried, primarily in Chinese, Korean and Japanese dishes.

SALEM LADY - Heavy yielding variety with nice nuts. Selected in Salem, Oregon.
Grafted

GINKGO SEEDLINGS - Unsexed gingko tree seedlings. Can be slow to mature.
1yr $11.00

Pecan Trees

Carya illinoinensis

Our pecan seeds come from the northernmost part of the pecan's native range. Even still, western Washington lacks the heat needed to fully ripen the nuts. Very cold hardy tree, but needs summer heat and warm nights to produce a good crop.

KANZA - Very scab resistant cultivar, recently released from USDA pecan breeding program. Productive, with medium-small sized nuts of good quality that crack out easily into clean halves. Approximately 65-80 nuts per pound. Pollinates with Northern. Somewhat self-fertile. Harvest in October. **Zone 5-9**
1yr $11.00; 1-2' $13.00

STUART - Widely adapted variety, scab resistant, nuts crack easily due to their thin shell. Has large nuts for an early ripening variety. Needs plentiful summer heat to ripen. **Zone 4-9**
1yr $11.00; 1-2' $13.00

NORTHERN PECAN SEEDLINGS - Tasty nuts are found within husks that split into quarters when the nuts are ripe in fall. Pecans tend to grow slowly in their early years. **Zone 4-9**
1yr $11.00

HICAN SEEDLINGS *Carya sp. X Carya illinoiensos* **-** A naturally occuring cross between hickory and pecan. The best of these seedlings will combine the wonderful flavor and early ripening qualities of hickory with the thin shell of pecan. A Hican tree should be hardy to -30F. **Zone 6-9**
1yr $11.00

Other Nut Trees

MONKEY PUZZLE *Araucaria araucana* - Tall, ornamental, evergreen nut tree with sharp, pointed leaves, native to Chile. Produces large cones with 250 nuts per cone. 2" long nuts are good tasting after roasting, resembling corn or chestnut. Thin, easily peelable shell. Hardy to -10°F. For nuts, plant two or more. Cross-pollination between male and female trees is necessary for nut set. These are unsexed seedlings. **Zone 6-9**
1 yr Band Pot $16.50

ORNAMENTAL & USEFUL LANDSCAPE TREES

*Also see **PNW Native Plants, page 33-36** for red-flowering currant, mock orange, salal, kinnikinnick, spirea, and more!*

Oak Trees

Quercus

Majestic, hardy trees that can grow throughout most of the US. Their edible nuts feed wildlife. Humans can also eat the acorns if you're willing to leach the tannins out of the nuts. This process involves soaking the acorns in water for several weeks while frequently changing the water.

Seedlings, priced as listed below

BUR OAK *Quercus macrocarpa* - This species has the largest leaves and acorns of any oak, and the nuts have been used as human food. Widely adapted. Good red fall color. **Zone 3-9**
2yr 12-30" Field Grown $10.50; Band Pot $17.00

CALIFORNIA BLACK OAK *Quercus kellggii*- Produces the largest and best tasting acorns of the West Coast native oaks. Has a dark trunk with large, sharply lobed leaves, reddish in spring, yellow in fall. Native to N. CA. Needs sharp drainage. Will re-sprout if top killed by fire. Acorns take 2 years to ripen. To 40-80'. **Zone 6-9**
Large Plug $12.50

COAST LIVE OAK *Quercus agrifolia* **-** A fast-growing evergreen tree with holly like leaves and slender, long, edible acorns. Native to Coastal CA, but hardy as far north as Western WA. **Zone 8-10**
Large Plug $12.50

LEATHER OAK *Quercus durata* - Dwarf evergreen oak native to Northen California, only reaching 5-10 feet at maturity. Long, leathery leaves. Medium sized acorns traditionally eaten by native people. **Zone 7-10**
Gallon Grown $26.50

NORTHERN RED OAK *Quercus rubra* **-** One of the fastest growing oaks with great fall color and plump acorns. A broad spreading tree when uncrowded. Great structural features for those interested in growing for timber purposes. **Zone 2-8**
2-3' $17.50; 3-4' $28.50

OREGON WHITE OAK *Quercus garryana* - Tough, drought tolerant Pacific Northwest native with dark green, leathery leaves and gray bark. Big, majestic, spreading shade tree. Edible acorns are a traditional food among local native tribes.
Zone 6-9
1-2' $12.50; 2-3' Transplant $15.00

SCARLET OAK *Quercus coccinea* - Red oak with deep red fall color. Tree has rounded, open habit. Acorns 1/2" to 1" long. Hardy and disease-resistant. Prefers full sun and well-drained soil. High-value timber. **Zone 4-9**
1yr $5.75, 2yr $11.00; Band Pot $12.50, 2-3' $17.00

Dogwood Trees

Cornus

Beautiful, showy trees that are commonly grown for their ornamental blossoms. Fruits attract wildlife. All-season interest in the landscape.

CHEROKEE BRAVE *Cornus florida* - Small deciduous tree, typically to 15-30', low-branching, broadly-pyramidal but somewhat flat topped habit. Reddish new growth and large, late blooming dark pink to red flowers. Known for its disease resistance. Great fall leaf color. **Zone 5-9**
Grafted 2-3' $45.00

CHINESE (ORIENTAL) DOGWOOD *Cornus kousa* - Large white flower bracts in June, which last a month, followed by large strawberry-red, edible but bland fruit. Scarlet leaves in the fall. Resistant to dogwood anthracnose and borers. Grows to 25'. Hardy to **Zone 5**
18-36" $9.00

EDDIE'S WHITE WONDER *Cornus nuttalli x florida* - Abundant, white, saucer-like flower bracts in April. Oval-shaped leaves with great red fall color. Small red fruit. Slow, slightly pendulous growth, to 25 ft by 20 ft. Part-sun to part-shade. Moist, well-drained, rich soil. Anthracnose resistant.
Zone 6-9
Gallon; Grafted 3-4' $50.50

ROSY TEACUP™ *Cornus kousa x nuttalli* Masses of reddish-pink blooms to 3" across are quite attractive, with early spring bloom time. Outstanding fall color. High disease resistance from *C. kousa* parentage. **Zone 6-8**
Grafted 2-3' $45.00

SATOMI RED *Cornus kousa* Oriental dogwood with pink to red flowers and the disease resistance of *C. kousa*. Great fall color. To 20 ft. **Zone 4-8**
Grafted 3-4' $50.50

STELLAR PINK *Cornus rutgeriensi* - Large, overlapping flower bracts cover this small tree with soft pink-red flowers in late spring, then vivid purple-red fall foliage. Fully branched from bottom to top. This vigorous and healthy hybrid of *Cornus florida x kousa* is a sterile cultivar. **Zone 5-8**
Grafted 2-3' $45.00

VENUS ® *Cornus kousa x nuttalli* - Tremendously large, creamy white flower bracts, up to 6" wide, in late spring. Deciduous, with glossy green leaves. Bright strawberry-like red fruits attract and feed wildlife and beneficial insects. Good fall color; leaves turn red and purple. A healthy grower with a densely low-branching habit near the ground, tall upright growth, and rounded crown, to 20 ft tall and wide. Resistance to powdery mildew and anthracnose. Patented Rutgers hybrid. **Zone 6-9**
Grafted 4-5' $55.50

PACIFIC DOGWOOD TREES

Cornus nuttalli

BARRICK - Fast growing pacific dogwood hybrid that can flower twice a year. Spectacular large white flower bracts in May and September. Some of its false petals may also have some hints of pink. Fruit is red and will attract birds, butterflies and bees. Compact, rounded crown form, reaching a height of 35 ft. Red color in autumn. Prefers acidic soil but can be grown in sun to part-shade. Developed in Salem, OR. **Zone 6-8**
Grafted Gallon $50.00

COLRIGO GIANT - A splendid selection of Pacific dogwood found along the Columbia Gorge. Large leaves with heavy texture and brilliant fall color, grows to 20'. White flowers up to 8" across with round, cup-like form. Sometimes an additional fall bloom, too! Highly susceptible to anthracnose. Best in dry summer areas. **Zones 6-8**
Grafted Gallon $50.00

OTHER DOGWOOD SPECIES

BUNCHBERRY *Cornus canadensis* - Groundcover creeping dogwood, only gets about 6" tall. White dogwood flowers followed by bunches of red berries in fall. Attracts bees and butterflies. Birds eat the fruits. Nice fall colors. Does not tolerate foot traffic. Produces clonal colonies. Great for naturalizing in woodlands. Grow in shade with moist, acidic soil and abundant organic matter. Native to northern US and Canada. **Zone 2-8**
Gallon $20.00

CORNELIAN CHERRY *Cornus mas* **-** This unique dogwood species bears tasty edible fruits reminiscent of cherries, and has been cultivated in Europe and Asia since ancient times. Fruit can be eaten fresh, used in pies, preserves and syrups. Very early spring bloom, with small yellow star-shaped flowers before the leaves appear. Reddish-purple fall hues. Plant in well-drained rich soils. **For grafted selections, see page 14.** Resistant to anthracnose. Hardy to -30° F. **Zone 4-8**
Large Plug $10.50

ELEGANT™ CORNELIAN CHERRY *Cornus mas* - Large, sweet fruited, heavy bearing selection. Very early spring bloom, a mass of yellow star-shaped flowers before its leaves. Red, edible, sweet pear-shaped fruits appear in late summer. Nice fruit for fresh eating and use in pies. Will attract wildlife. Reddish-purple fall color. Grows over 10 ft. Needs acidic, rich, well-drained soil. Ukrainian variety. Resistant to anthracnose. Plant two varieties for cross-pollination and to ensure good crops. **Zone 4-8**
Grafted Band Pot $32.50

RED OSIER DOGWOOD *Cornus sericea*
Multistemmed shrub with great red fall and winter color. Bare twigs have bright red, attractive bark. Likes moist habitat and is shade tolerant. **Zone 3-7**
2-3' $6.00ea, 10+ $5.50ea, 100+ $5.00ea

Linden Trees

Tilia

AMERICAN LINDEN *Tilia americana* - American Linden, or Basswood, is the hardiest species of linden, native to the eastern United States from Florida to Maine, with large leaves and fragrant yellow edible blooms in June. Very cold hardy. **Zone 2-9**
2-3' $10.00

SILVER LINDEN *Tilia tomentosa* - Hardy, fast-growing tree. Heart-shaped leaves with silvery undersides. Wonderfully fragrant summer flowers. Widely adapted, the most insect and drought resistant linden with prettiest leaves. Flower buds and flowers are edible and tea made from the flowers has mild sedative properties, making a good nighttime drink. **Zone 4-9**
Band Pot $12.00

Bamboo

Among the most useful plants on Earth. Beautiful to look at, making effective evergreen screens. They also produce delicious edible shoots in the summer which can be cooked and eaten. Harvesting new shoots can be a means of controlling its spread.

Left unchecked, in a well-watered sunny location, **spreading bamboos** can become an ever-increasing grove. **Clumping bamboos** will not spread by runners; growth of the clumps is slow and incremental, not aggressive.

Cannot be shipped to Hawaii

SPREADING BAMBOO

Phyllostachys

Gallon $45.00 unless otherwise noted

GOLDEN GIANT TIMBER BAMBOO *Phyllostachys vivax* - The most spectacular of the giant bamboos. Distinctly beautiful golden yellow canes with frequent thin green vertical striping. The best golden cane coloring of any of the hardy bamboos. Very vigorous shoots, 3-5" diameter growing up to 50ft. in one summer in established groves. Sun or shade, but prefers sun. Mature, in ground plants can survive down to -5°F. **Zone 6-10**
Gallon $50.00

SWEET SHOOT *Phyllostachys dulcis* - Establishes quickly to send up 2-3" diameter white shoots that are sweet enough to be eaten raw when just emerging. Likes sun to part shade. Pretty thick green canes bend toward the light when young, and straighten with age. Dense foliate and thick canes for its height. Evergreen. Grows 35-40 ft. **Zone 7-10**
Gallon

CLUMPING BAMBOO

Fargesia

DRAGON'S HEAD *Fargesia dracocephala* **-** A densely leaved clumping bamboo with a fan shaped growing pattern to about 9 ft. in height and width at the top. The evergreen leaves don't curl if stressed as with some species of *Fargesia* bamboo. Does well in sun or part shade. Native to the mountains of China where it is a food source of the giant panda. Hardy to about -10° F. **Zone 5-10**
Gallon $45.00

FARGESIA SCABRIDA - A large-leafed clumping bamboo, intermediate in size between Ivory Column and Dragon's Head at maturity, to about 15 feet. New column sheaths are reddish orange. Does very well in shade to partial sun. **Zone 6-9**
4" Pot $20.00; Gallon $51.00

IVORY COLUMN *Fargesia robusta* - A spectacular clumping bamboo, pale culm sheaths alternating beautifully with the dark green canes. New shoots come up red and green early in the growing season and grow robustly upright to 13-20' Excellent hedge material in sun or part shade. Hardy and wind resistant with very dense foliage. **Zone 6-9**
Gallon

SUNSET GLOW *Fargesia dracocephala "rufa"* **-** An abundance of reddish-orange cane sheaths in a compact clump, makes this an attractive small specimen. Mature height about 8', can grow in sun or shade and leaves won't curl in sun or freezing weather. In hot regions, it prefers afternoon shade. The hardiest and most popular clumping bamboo. **Zone 5-9**
4" Pot $20.00

Beech Trees

Fagus sylvatica

EUROPEAN BEECH - A widely adapted, important timber tree, with strong, dense wood, and smooth bark. Small, wavy leaves and drooping catkins. Small triangular shaped, thin shelled nuts are good tasting to wildlife and humans yet toxic in large amounts. Long-lived and can become very large, up to 80-150 ft. at old age. Makes a beautiful, tall specimen or shade tree with great fall foliage. May hold on to autumn leaves and drop instead in spring, adding winter interest. Sun or shade tolerant. Grows in many types of soils but prefers moist and well-drained conditions. **Zone 4-7**
Band Pot Seedling $9.50

DAWYCK PURPLE - Narrow and upright branching columnar tree with dark purple leaves. Attractive as a tall hedgerow. Serrated leaves emerge and remain dark purple until transforming to a spectacular copper foliage in autumn. Smooth barked, upright, silvery-grey branches provide striking winter interest. Very densely branched and tall, up to 50 ft. and 10 ft. wide, requires almost no pruning to maintain its form. **Zone 4-9**
Grafted 3-4' $50.00

PURPLE BEECH - Dense, round crown. Smooth, silvery-gray trunk that is low branching with new growth that has thin, zig-zagging branches. Leaves emerge glossy and coppery-purple then change to a dark green with purple hues over the growing season. Fall foliage is a golden copper and some of the glossy papery bronze leaves may remain on the tree through the winter. Slow growing, large tree to 50-70 ft. tall and 40 ft. wide. Use for windbreak, hedges and to provide shade. Elegant ornamental that adds an unusual focal point in the landscape. Healthiest in well-drained, moist soils. Better colors in full sun. Also called Copper Beech. **Zone 4-7**
Band Pot $12.50

RED OBELISK - Columnar reddish-purple leaved beech. Slow growth habit and narrow form makes it ideal for smaller residential landscapes while also a striking vertical accent or specimen in most any setting, growing to 40 ft. by only 5 ft. wide. New leaves are vivid pink and red then darkening to a deep burgundy. Brilliant fall color, papery copper leaves that remain on the branches and smooth silver bark adds attractive winter interest. **Zone 4-7**
Grafted $45.00

Maple Trees

Acer

RED LEAF JAPANESE MAPLE *Acer palmatum atropurpureum* - Selected seedlings that retain reddish-purple color well. A small, rounded shrublike tree. **Zone 5-9**
2yr 3-4' $13.50

SUGAR MAPLE *Acer saccharum* - Commercial source of maple syrup. Common landscape tree. Very attractive in fall with its foliage changing in stages of yellow, orange, red to bronze. Produces deep shade and not much can be grown under its canopy. Oval-shaped crown. Native to Canada and northeastern/central U.S. Hardy, widely adapted tree reaching heights of 40-100 ft. **Zone 3-8**
2-4' $9.25

VINE MAPLE *Acer circinatum* - Native to western North America as an under story tree that grows below other much taller forest tree and conifers. A very colorful small multi-stemmed shrub or small tree growing to about only 15-20'. Great for erosion control. **Zone 5-9**
2-3' $10.00ea, 10+ $9.00ea, 100+ $8.00ea

PACIFIC FIRE VINE MAPLE *Acer circinatum* Young twigs with vivid coral-red color, fading on older branches. Winter interest contrasting against the snow. Bright green leaves in summer. Yellow autumn foliage. Broad palmate leaves. Small tree growing about 10 ft. tall. **Zone 5-9**
Grafted 4-5' Large $50.00

BIG LEAF MAPLE *Acer macrophyllum* - Leaves up to 15" across on a big, fast growing tree, native from Alaska to California. Yellow fall color. Valued for lumber and firewood. Edible flower clusters. To 75'x50'. **Zone 5-8**
18-36" $6.00 each, 10+ $5.50ea

Eucalyptus Trees

Fast growing evergreens

Gallon Grown $30.00
Unless otherwise noted

ALPINE SNOW GUM *Eucalyptus pauciflora niphophila* - Small, broad tree with long, lanc-shaped bluish-green to silver mature leaves, and round juvenile leaves. Brown-red bark sheds in strips, revealing greyish-white mottled trunk. Mass of round white flowers clusters in spring and summer but are not particularly showy. Can handle some snow and will bend its branches down to shelter itself. Good choice for the Pacific Northwest. Very attractive, deer resistant. Plant in well-drained soil To 20' on average. **Zone 7-10**

CIDER GUM *Eucalyptus gunnii* - A favorite in dried floral arrangements for its aromatic foliage. Attractive, blue, round disk-shaped juvenile leaves on either side of the stem. Will maintain this characteristic if pruned back annually and grown as a bush. Otherwise, grows quickly to 50 ft. and will have long, willow-like leaves. Narrow, columnar evergreen tree with large, spreading branches. Trunk has peeling bark and produces a sap similar to maple syrup. Prefers sandy soils. Native to Tasmania. Among the hardiest of the Eucalyptus, to about 0° F. **Zone 7-10**

Locust Trees

BLACK LOCUST *Robinia pseudoacacia* - Native to central eastern U.S. Legume tree that fixes nitrogen. Rapid grower, tolerates poor or dry soils, or clay. Very hard wood is rot resistant, making for fence posts that last 40 years or more. Among the highest BTU value for firewood. Will continually resprout quickly from the stump if coppiced for firewood or fence post production. Fragrant white flowers resembling pea flowers or wisteria blossoms from May to June, providing great forage for honeybees. 30-60 ft. with a 30 ft. spread. Young branches are very thorny. Best in full sun. **Zone 4-8**
CANNOT SHIP TO ME or MN
1yr $6.00 each, 10+ $5.50ea, 100+ $5.00ea

HONEYLOCUST *Gleditsia triacanthos* - Produces large, long, flat, bean pods with sweet, edible pulp. Immature pods can be cooked and eaten. Young seeds taste like raw peas. Pods are considered a useful fodder for livestock. These seedlings are from open pollinated trees that produced good pod crops and were thornless, although some of the seedlings will have thorns when young. Wood is hard and durable and imparts a desirable honeywood flavor to grilled foods. **Zone 4-8**
1yr $5.50ea, 10+ $5.00ea, 100+ $4.50ea

Tea Plants

KOREAN TEA PLANT *Camellia sinensis*
Attractive evergreen leaves that are used for green or black tea. If leaves are not harvested, small white camellia blossoms will dot the plant in fall. Sun or shade; moist and acidic soils. **Zone 7-10**
4" Pot $16.50; Gallon $30.00

WINTER CREEK LABRADOR TEA *Rhododendron groenlandicum* - A hardy evergreen flowering shrub related to azaleas. Aromatic leaves are used fresh or dried to make a pleasant-tasting tea. Leaves can also be chewed or added to beer to make it more heady. Mass of white star-shaped flowers in spring. Tolerates wet sites, this shrub stays under 3 foot in height with a spreading habit. Native across North America from Washington state to Greenland. Not a "true" tea plant, but used widely used as a tea substitute, including during the American revolutionary war. **Zone 3-8**
4" Pot $14.00

Mulberry, linden, blueberry, raspberry, wintergreen, alder, and spicebush leaves have all been used to make herbal teas as well.

Other Trees & Shrubs

BALD CYPRESS *Taxodium distichum* - Native to the gulf region, very hardy and widely adapted. Wood exceedingly resistant to decay and insects. Will grow in standing water and is more ornamental under such conditions producing buttress-like knees at base of trunk. Fairly fast growth. Beautiful orange-brown foliage in fall. Sheds its needles in winter, thus the name "bald." **Zone 4-9**
2-3' transplant $10.00; 3-4' transplant $15.00

DAWN REDWOOD *Metasequoia glyptostroboides* Ancestral tree of the redwood. Thought to be extinct and known only from fossils until in 1947, a small isolated grove was discovered in a remote part of China. Nice golden color in autumn before the needles fall. Tolerant of moist sites and polluted air, fast growing to 90' in 30 years. **Zone 4-9**
Plug $8.00

SASSAFRAS *Sassafras albidium* - North American native tree with spicy aromatic leaves and wood. Beautiful mixed yellow, orange and red foliage in autumn. Larval host for many North American butterflies Roots and bark are pursued for culinary uses in root beer or tea and spices for gumbo and other Louisiana Creole cuisine. **Zone 4-9**
4-5' $32.00

ROSA RUGOSA "RUBRA" - Pink to red flowering selection. Single flowers with large yellow stamens at center are spangled throughout dense shrubby bushes most of the summer. Large edible reddish-orange hips late summer through fall, as well as colorful yellow to orange mottled fall leaf color. Makes a great hedge plant due to thorny and thick canes that colonize into wide rows. Grows to about 6 ft. tall by 6 ft. wide. Most disease-resistant rose variety; will even flower in part shade. Variety 'Rubra'. **Zone 3-10**
18-24" $6.50 each, 10+ $6.00ea, 100+ $5.50ea

ROSA RUGOSA "SANDY" - Red flowering strain selected for its tolerance of poor soils and high salt concentration, widely used in sand dune and beach stabilization projects. Large edible reddish-orange hips late summer through fall. **Zone 3-10**
1-2' $5.50 each, 10+ $5.00ea

WINDMILL PALM *Trachycarpus fortuneii* - The hardiest palm tree, with fan fronds up to 4' across. Slow growth to 15' or more. Also known as Hemp Palm due to tough, useful bark fibers. Young flower bracts are also edible. **Zone 7-10**
Gallon $30.00

PACIFIC NORTHWEST NATIVES

Native Conifers

All require acidic soils. Bareroots are best planted in winter or early spring.

ALASKA CEDAR *Callitropsis nootkatensis*
Northwest native conifer with a narrow form and downward sweeping branches. Native on moist sites in the mountains of Oregon to Alaska. Can live 1500 years or more. Prefers climates with cool summers. Large evergreen tree to about 35 ft. tall and 5 ft. wide. Also commonly called yellow cedar or Nootka cypress. **Zone 5-9**
Large Plug $7.00

COASTAL REDWOOD *Sequoia sempervirens*
One of the tallest living things on earth, able to survive several thousands of years. Very fast grower and highly valued. Rot resistant wood, upright pyramidal form with branches starting high up the trunk. When healthy, roots send up shoots near the soil surface, forming a grove. **Zone 7-8**
Large Band Pot $10.00

DOUGLAS FIR *Pseudotsuga menziesii* - Fast growing native conifer that remains the most important commercial timber grown in the Pacific Northwest. Requires a sunny location. One of the tallest evergreens, capable of growing over 200'in its natural habitat. Otherwise averaging 60-80'.Very long-lived tree, can live for several hundred years. Prefers moist soils and cool summers. **Zone 4-6**
2yr $3.75ea, 10+ $3.00ea, 100+ $2.50

GIANT SEQUOIA *Sequoiadendron gigantium*
Fast growing, tall, shade tolerant, densely branched, and rot resistant. The hardiest redwood. **Zone 6-8**
Plug $4.50ea, 10+ $4.00ea, 100+ $3.50

INCENSE CEDAR *Calocedrus decurrens* - Tall, narrow evergreen with dense foliage. Fast growing; effective windbreak or privacy screen. **Zone 5-8**
Plug $4.50ea, 10+ $4.00; Band Pot $10.50

NOBLE FIR *Abies procera* - A beautiful, symmetrical, tall evergreen tree. Short, stiff blue needles and large upright cones. Used for cut boughs, lumber, and very popular as Christmas trees. **Zone 5-10**
3yr $6.00ea, 10+ $5.00ea, 100+ $4.00ea

PACIFIC YEW *Taxus brevifolia* - A very slow growing, shade tolerant evergreen tree. Native to the Pacific Northwest and can be found as an understory tree that grows to about 45 ft. tall. Foliage has been used in anti-cancer medications. Female trees can have red cup-like berries which are poisonous. Prefers well-drained moist soils and cool summer climates. **Zone 6**
Large Plug $11.00

PORT ORFORD CEDAR *Chamaecyparis lawsoniana* - Attractive evergreen with fragrant foliage and bark. Well suited for hedgerows because of its upright narrow form. Fast growing to an average height of 80 ft. but capable of up to 200 ft. in its native habitat. Native the Pacific Northwest, particularly to southern coastal Oregon. A popular landscape ornamental. Strong, rot resistant timber. Also known as Lawson Cypress. **Zone 5-9.**
2-3' Transplant $8.50; Large Band Pot $13.00

SITKA SPRUCE *Picea sitchensis* - Important commercial timber tree in moist lowland sites. Fairly fast growth once established. Bud worm resistant seed source. **Zone 6-8**
Plug $8.00

WESTERN HEMLOCK *Tsuga heterophylla*
Fast growing in sunny conditions. Tolerates shade. Canopy is so dense that little can grow under it. Important construction wood. Old growth can reach a height of 200'. Acidic soil with high organic matter. **CANNOT SHIP TO MI. Zone 5-8**
2yr Transplant $7.00

WESTERN RED CEDAR *Thuja plicata* - Fast growing, very common native conifer in the Pacific Northwest. Will grow in shade and moist soils. Dark green scaly foliage is very aromatic. Red, peeling bark. Grows to an average of 50-70 ft. tall but can reach up to 180 ft. in its native habitat. Long-lived. Rot resistant timber, used in crafts and woodworking. Hardy to -20° F. **Zone 5-7**
Large Plug $8.00; 2yr 18" Transplant $5.00ea, 10+ $4.75ea, 100+ $3.75ea

Native Deciduous Trees

Deciduous trees native to the Pacific Northwest provide shelter and food for a wide range of wildlife. Trees native to the Northwest are tough, hardy and require less maintenance than non-natives.

BIG LEAF MAPLE *Acer macrophyllum* - Leaves up to 15" across on a big, fast growing tree, native from Alaska to California. Yellow fall color. Valued for lumber and firewood. Edible flower clusters. To 75'x50'. **Zone 5-8**
18-36" $6.00 each, 10+ $5.50ea
(Also on Page 32)

BLACK COTTONWOOD *Populus trichocarpa*
Fastest growing Northwest native, to 45' in 7 years. Likes moist soil. **Zone 5-10**
3-4' $5.00 each, 10+ $4.50ea, 100+ $4.00ea

BLACK HAWTHORN *Crataegus douglasii*
Large shrub or small tree, profuse apple-like blossoms. ½" long black fruits are appreciated by birds in fall and winter. **Zone 5-9**
18-36" $6.75ea, 10+ $5.75ea, 100+ $5.00ea

CASCARA SAGRADA *Frangula/Rhamnus purshiana* - A nicely shaped small northwest native tree with yellow fall color. Round black fruits bring in the songbirds. Bark used medicinally, primarily as a laxative, and known to some Pacific Northwest native people as "chittem" or "chitticum." Tolerates a wide variety of soil types and sun or shade. In the Buckthorn family. **Zone 3-9**
24-36" $5.75

CHOKECHERRY *Prunus virginiana* **-** Native east of the Cascade mountains from California to British Columbia. Bears 4-6" long clusters of small white flowers in late spring followed by bunches of reddish to dark purple tart fruit in August. Primarily used in jams or by wildlife. Tartness is greatly reduced when very ripe, well after fruit has turned dark. **Zone 4-9**
18-36" $7.00

PACIFIC CRABAPPLE *Malus fusca* - Widely adapted West Coast native from CA to AK. Able to grow in very wet sites. Tiny tart fruits. Also called swamp crabapple. **Zone 5-8**
2yr 18-36" $7.50ea; 10+ $7.00ea
(Also on Page 15)

PACIFIC DOGWOOD *Cornus nuttallii* - Our West Coast native dogwood and the largest of all dogwoods, growing to heights of 30-50' by 25' wide. Occasionally reblooming in early fall. Produces rosy red berries. Nice autumn foliage. Prefers shade and makes for a wonderful understory tree, white blossoms glow under dappled sunlight in the forest and shine in the moonlight. Attractive, flowering addition to a PNW native planting. **Zone 7-9**
1yr $5.50each, 10+ $5.00ea, 100+ $4.50

PACIFIC WILLOW *Salix lasiandra* - Fast growing wetland tree with black bark on older specimens. Leaves are long, narrow, shiny, dark green.
1-2" 4.25

PAPER BIRCH *Betula papyrifera* - Small to mid-sized tree with attractive, smooth, white bark peeling in papery layers. Historically used for canoe making and basketry. Native people have chewed birch resin containing xylitol, a natural disinfectant now used in oral hygiene preparations. In Canada and Alaska, the sap is tapped to make syrup and various drinks. Golden fall color. **Zone 2-8**
3-4' $6.50

QUAKING ASPEN *Populus tremuloides* - Slender, fast-growing tree often growing in clumps. Heart shaped leaves that flutter in the slightest breeze. Bright yellow fall color. The largest organism in the world, called Pando, is a 106 acre forest consisting of 47,000 trunks of a single clone of quaking aspen, producing suckers from a single massive root system. It is growing in the Fishlake National Forest in central Utah. Native to more states than any other tree, yet not common in Washington or Oregon. Prefers moist ground. **Zone 2-8**
3-4' $8.50, 10+ $8.00

RED ALDER *Alnus rubra* - Most commercially valuable hardwood tree native to the Pacific NW. Extremely rapid growth typically 80' in 25 years. Wood makes great furniture and clean burning firewood. Nitrogen fixer, perfect for disturbed sites. Likes moist ground. Bark and catkins used in herbal medicine. **Zone 3-8**
18-24" $6.00ea, 10+ $5.50ea, 100+ $5.00

OREGON ASH *Fraxinus latifolia* - Our west coast ash tolerates standing water exceptionally well. Thin if grown in a single-variety grouping. Strong, beautiful, elastic wood, great for tool handles and cabinetry. Yellow fall color. To 80'. CANNOT SHIP TO UT.
Zone 6-8
2-3' $5.25ea

OREGON WHITE OAK *Quercus garryana* Tough, drought tolerant, Northwest native with dark green leathery leaves, gray bark. Big majestic spreading shade tree. Edible acorns are a traditional food and popular with wildlife. **Zone 6-9**
1-2' $12.50; 2-3' Transplant $15.00

PACIFIC FIRE VINE MAPLE *Acer circinatum* Young twigs with vivid coral-red color, fading on older branches. Winter interest contrasting against the snow. Bright green leaves in summer. Yellow autumn foliage. Broad palmate leaves. Small tree growing about 10 ft. tall. **Zone 5-9**
Grafted 4-5' Large $50.00
(Also on Page 32)

VINE MAPLE *Acer circinatum* - Native to western North America as an under story tree that grows below other much taller forest tree and conifers. A very colorful small multi-stemmed shrub or small tree growing to about only 15-20'. Great for erosion control. **Zone 5-9**
2-3' $10.00ea, 10+ $9.00ea, 100+ $8.00ea
(Also on Page 32)

Native Shrubs

AUSTIN GRIFFITH MANZANITA *Arctostaphlos desiflora* - Large evergreen shrub with reddish brown bark, red stems, and big clusters of pink flowers. Loved by butterflies and hummingbirds. Drought tolerant. **Zone 8-10**
Gallon Grown $28.00

BEAKED HAZEL *Corylus cornuta* - PNW native hazel. Small, thick shelled nuts enclosed in a bristly husk. Shy bearing. Late flowering, early ripening, and blight immune. **Zone 4-8**
2-3' $8.50

BLUE ELDERBERRY *Sambucus caerulea* - Fast growing, hardy shrub with large clusters of tiny white flowers and huge quantities of easily harvested fruit. For jams, wine, and preserves. 15-20 ft at maturity, sometimes taller. **Zone 3-8**
1yr $5.00; Gallon $25.00

BLACK GOOSEBERRY *Ribes divericatum* Thorny shrub to 5' at maturity. Sun or partial-shade. Very tasty purplish-black fruit with flavor like black currant. Disease resistant. **Zone 4-8**
18-36" $9.25ea; 10+ $8.25ea

RUSSET BUFFALOBERRY *Shepherdia canadensis* - Widely adapted nitrogen fixing shrub with small yellow flowers and juicy but bitter red berries. Also known as soapberry, fruits are traditionally used by native people in the preparation of *sxusem*, or "Indian ice cream." **Zone 2-7**
12-18" $5.75

BUNCHBERRY *Cornus canadensis* - Groundcover creeping dogwood that gets about 6" high. White dogwood flowers followed by bunches of red berries in fall. Attracts bees and butterflies. Birds eat the fruits. Nice fall colors. Great for naturalizing in woodlands. Grow in shade with moist, acidic soil and abundant organic matter. **Zone 2-8**
Gallon $20.00

GOLDEN CURRANT *Ribes aureum* - Clusters of fragrant, bright yellow flowers in spring followed by sweet, juicy, large orange to burgundy edible berries. Fruit keeps up to 2 months on the bush. A vigorous, widely adapted shrub, to 9 ft. Native from Washington state to Nebraska. **Zone 2-8**
2yr 18-36" $8.50ea, 10+ $7.50ea
(Also on page 20)

EVERGREEN HUCKLEBERRY *Vaccinium ovatum* - Shade tolerant, evergreen shrub native to the coastal northwest. Edible shiny black, blueberry like fruit in fall. Cut branches are used in floral arrangements. Needs acidic soils. Grows about 2-3 ft. in sun and 6 ft. in shade. **Zone 7-9**
Quart $20.00; Gallon $26.00

CASCADE JEWEL™ EVERGREEN HUCKLEBERRY *Vaccinium ovatum* **-** An especially productive variety with good-sized black berries. It has an upright compact form 3.5ft by 3ft. Dark red new leaves in the spring turn green in the summer. Patented OSU selection. **Zone 7-9**
Gallon $28.00

CASCADE SUNBURST ™ EVERGREEN HUCKLEBERRY *Vaccinium ovatum* **-** Selection with especially brilliant pink new growth in spring gradually turning green. Abundance of black berries in early fall. **Zone 7-9**
Quart $20.00

NATIVE STAR EVERGREEN HUCKLEBERRY *Vaccinium ovatum* - Selected for fruiting and ornamental qualities. Upright, compact form, with year-round glossy green small leaves and dark burgundy berries in fall. Spring new growth is burgundy. Will grow sun or shade; more berries in sun, but will need supplemental watering. Grows to about 6 ft. tall. **Zone 7-9**
Small Plug $6.75

SCARLET OVATION EVERGREEN HUCKLEBERRY *Vaccinium ovatum* - This selection is noted for more compact growth (3' x 3') and especially colorful scarlet new growth in spring that turns green by midsummer. **Zone 5-8**
Gallon $28.00

RED HUCKLEBERRY *Vaccinium parvifolium* Very shade tolerant northwest native shrub. Produces pretty pink to red edible berries the size of a small blueberry. Tart and refreshing in midsummer. Needs soil high in organic matter. Grows to about 6 ft.
Zone 6-8
Plug $6.75; Gallon $28.00

MOCK ORANGE *Philadelphus lewisii* - Large, fragrant, white flowers cover these medium-sized, multi-stemmed shrubs in late June. Shredding bark and yellow fall color are also attractive. **Zone 4-8**
1yr $4.50

NOOTKA ROSE *Rosa nutkana* **-** Large pink flowers and big red rose hips. Sweet scented. Widely adapted Pacific Northwest native to dry or moist sites. Nootka Roses make for good for hedgerows and wildlife plantings. **Zone 7-8**
1-2' $4.50

OSOBERRY *Oemleria cerasiformis* - Typically a 10-foot shrub or small tree with hardy, bell shaped male or female white flowers in late winter. Purple fruits in late spring are 1/2" long and seedy but edible. Formerly called "Indian plum." Widely adapted to sun or shade. **Zone 6-8**
2-3' $7.50, 3-4' $10.00

CASCADE OREGON GRAPE *Mahonia nervosa* - A dwarf form that is only 12-24 inches tall at maturity. This pretty evergreen shrub is a Pacific Northwest native that naturalizes in the understory of forests. Yellow spring flowers and very tart blue berries. Glossy green serrated leaves which look similar to holly leaves are reddish purple over winter. Its leaves are commonly used in floral arrangements. **Zone 5-8**
Large Plug $10.25

OREGON GRAPE *Mahonia aquifolium* - Pretty, evergreen understory shrub, 3 - 5' tall. Native to the Pacific Northwest. Bright yellow spring flowers with very tart blue berries. Leaves commonly used in floral arrangements. Glossy green serrated leaves reminiscent of holly turn reddish purple over winter. **Zone 5-8**
Large Plug $11.75

PACIFIC NINEBARK *Physocarpus capitatus* - Long arching branches with shredded peeling bark. Produces large clusters of small white flower domes in spring. A wonderful butterfly forage and larval host. Summer sees the flower heads turn papery with small red fruits. Fall touches the maple-shaped leaves with rosy-brown. Prefers sun or moderate shade and moist soils. Grows about 10-15 ft. tall. **Zone 4-10**
2-3' $5.50

RED OSIER DOGWOOD *Cornus sericea* Multistemmed shrub with great red fall and winter color. Bare twigs have bright red, attractive bark. Likes moist habitat and is shade tolerant. **Zone 3-7**
2-3' $6.00ea, 10+ $5.50ea, 100+ $5.00ea

SALAL *Gaultheria shallon* - This understory shrub with edible black berries grows in clusters. Blueberry-sized fruit were a staple food of N.W. Coastal Indians, eaten fresh, cooked and dried. In sun, will be about 2 ft. tall, in shade up to 6 ft. Spreads via aggressive runners and can colonize large patches in favorable conditions; one of few shrubs that can thrive in dry shade. **Zone 7-9**
Gallon $25.00

CASCADE SUNRISE SALAL *Gaultheria shallon* - A clone of salal, has bright red/orange new growth on oval-shaped leaves. Older leaves are deep forest green, and remain all winter. Dwarfing selection grows to 3 ft. **Zone 6-9**
Gallon $28.00

CASCADE CARPET SALAL *Gaultheria shallon* - A clone of salal, gets about half the size of typical salal, to about 3 feet in height. **Zone 7-9**
Gallon $28.00

SALMONBERRY *Rubus spectabilis* - Understory shrub, very shade-tolerant, pink flowers in early spring, yellow or red fruits in May and June. The berries are juicy, seedy, and refreshing when little else is ripe. **Zone 3-9**
$4.00ea, 10+ $3.50ea

SERVICEBERRY *Amelanchier alnifolia* - Masses of white flowers in spring followed by pea sized tasty blue fruits in summer. Good fresh and in pies, pancakes, etc. Red orange fall color. Grows to 8-10' **Zone 3-8**
For named selections see ***Page 17***
18-36" $7.50, 10+ $7.00, 100+ $6.50; 3-4' $9.25

SNOWBERRY *Symphoricarpos albus* - Small, spreading shrub that grows along forest edges. White berries persisting over winter until eaten off by wildlife. Shade tolerant. **Zone 4-9**
2-3' $6.00

HARDY SILVERBERRY - *Elaeagnus commutata* A very tough nitrogen fixing decidious shrub native to the Rocky Mountains and Plains of Canada and the U.S. Nitrogen fixer. Suitable on reclaimation sites and other poor or disturbed soils, or for use as a hedgerow or windbreak. Small fragrant yellow flowers followed by silvery foliage on reddish brown stems. The silverberries are dry and mealy. While edible, they are mostly consumed by birds. Reaches a height of 10-12 ft. tall at maturity. Very hardy and drought tolerant once established. **Zone 2-7**
2-3', $9.25ea, 10+ $8.75ea, 100+ $8.25ea

SWORD FERN *Polystichum munitum* - Large, evergreen fronds up to 4' in height and width. Native to cool shady forests in the maritime northwest, from Northern California to Canada**. Zone 7-8**
4" Pot $11.00

HARDHACK SPIREA *Spiraea douglassii* Wetland shrub, 6-10 ft. Showy pink flowers are beautiful and popular with pollinators, especially western native butterflies. **Zone 5-8**
1yr $4.00

THIMBLEBERRY *Rubus parviflorus* - Thornless plant with large, soft maple shaped leaves, spring time profusion of white flowers. Raspberry-like edible fruits are bright red and sweet. **Zone 3-9**
$4.00ea, 10+ $3.50ea, 100+ $3.00ea

RED FLOWERING CURRANTS

Ribes sanguineum

Very showy northwest native shrub. Stunning red flowers in early spring that are very attractive to hummingbirds. Songbirds like the fruits in fall.

Medium $15.00 • Large $22.00

CLAREMONT PINK - Very long blooming period, from late winter to February-April. Tubular flower are vividly rosy-pink and up to 6" long. Sun to part shade. **Zone 6-10**
Medium; Large

KING EDWARD VII - A select later blooming variety of red flowering currant. Dense form, low growing. Spectacular crimson flowers in early spring. **Zone 4-9**
Medium; Large

POULSBO SCARLET - Showy Northwest native. 5-10' shrub, with has intense, deep red flowers, in spring. Attracts hummingbirds and songbirds. **Zone 6-9**
Medium; Large

RED FLOWERING CURRANT SEEDLNGS 5-10' shrub blooms in early spring. Great wildlife habitat. Sun or shade. Produces blue-black berries that are edible but not the tastiest, however they will be enjoyed by the birds. **Zone 4-9**
24-36" $8.50

Broadleaf Evergreen Trees

PACIFIC MADRONE *Arbutus menziesii* - White flowers in spring followed by clusters of red berries in fall are popular with birds. Reddish brown trunk. Bark peels in irregular flakes. Resents disturbance and prefers a well drained site. Can grow up to 100 ft. tall. Hardy to -7°F. **Zone 4-8**
Large Plug $12.00

Nut Tree Seeds

Tree seeds require **"stratification"** in order to germinate. This simply means keeping them in a cool, moist environment during the winter months, such as a sealed bag in the refrigerator. See our Youtube channel for a video on growing trees from seed.

PECAN:
Northern, Kanza, Stuart **$6.00/pound**

CHESTNUT: Belle Epine, Bouche de Betizac, Bisalta #3, Bracalla, Colossal, Marigoule, Marrisard, Nevada, Marron di Val di Susa, Precoce Migoule, Silverleaf, Tanzawa, Tsukuba, Whitten North
$9.00/pound

HAZELNUT:
Jefferson, McDonald, Tonda di Giffoni, Yamhill
$6.00/pound

ENGLISH/PERSIAN WALNUT:
Howard **$7.50/pound**

BUTTERNUT: $12/pound

SCARLET OAK: $8.00/pound

Other Seeds

Shipping cost is $7.90/package

PAW PAW *Asimina triloba*: **10 seeds $4.00**

KAKAI PUMPKIN: 5-15 pound pumpkins for use in pies, soups, stir fry. Can keep for half a year. Hundreds of seeds (pepitas), inside are **without shells** a delicious high-protein snack. Great in trail mix, granola, or on salads.
10 seeds $3.00

Nuts for Eating

BLACK WALNUTS
Strong, rich flavor with twice the protein of an English walnut. Retains flavor especially well in cooking. Excellent in cookies & ice cream.
Shelled - $18.00/pound; $9.00 per 1/2 pound

HAZELNUTS
In-shell, certified organic **$7.00/pound**
Shelled, certified organic **$10.00/8oz, $18.00/16oz**

ENGLISH (PERSIAN) WALNUT
In-shell **$7.00/pound**

For nut and seed orders, follow the normal shipping chart. **The charge will be adjusted at the time the order is shipped.** Different nuts pack very differently. **The following list may be used as a guide to estimate your final charge:**

1-3 lb Nuts or Seeds - $16.00
3-10 lbs - $25.00
10-15 lbs - $33.00
Over 15 lbs - Multiple Boxes

Orchard Supplies

Follow the normal shipping chart. The change will be adjusted in our office (more or less depending on the weight/size of the final package)

GRAFTING BANDS - We use these specialized rubber bands for whip grafting and bud grafting. Each grafting band is 6 inches long x 1/4 inch wide and .016 inch thick.
$3.50/packet approx. 50 bands

BIRD NETTING - Protect your beautiful fruits and berries with our easy to use bird netting. This product is the most effective netting in our orchards because of its small mesh size (3/8"). Comes in 13x25' sections. We can send a longer pieces, divisible by 25, by request.
$32.00/Section

PLANTSKYDD - Deer, Rabbit and Elk Repellent. It protects for up to 6 months in the dormant season and 3-4 months during the growing season. 2.2 pounds of concentrate yields 10 quarts of spray, enough to treat about 1000 1' plants.
$64.95

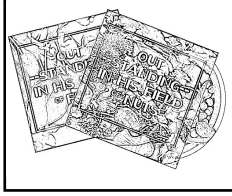

NYLON FOOTIES - These work well for apple maggot control. Put them on over the individual fruits when they are nickel to quarter size. Footies will expand along with the fruit as it grows, and can be reused.
$16.50/Box of 144 *Base shipping price is $16.00, adjusted if ordering multiple boxes*

DEER FENCING - Protective netting for gardens and landscaping. 7'x100' section. ¾" mesh made from recycled material. This black mesh is lightweight and strong with UV inhibitors for a long life. Easy to work with and can be cut with scissors. For fencing, use posts at 15' intervals. Weave baling twine or wire through top of mesh and secure to posts. It can be draped directly on shrubs for shrub protection. Black netting blends into the landscape. Inexpensive, quick to install, and less visible than wire fencing. It shouldn't be considered a permanent solution. If needed only seasonally, keep out of sunlight when not in use to preserve its strength over time. **Follows normal shipping chart on page 40.**
$35.00/ Section

OUT - STANDING - IN HIS FIELD OF FRUITS AND NUTS

A two-part video exploration produced by Burnt Ridge Orchards, featuring nationally renowned tree expert (and Burnt Ridge co-owner) Michael Dolan. Hear how Michael and Carolyn's 40 year adventure began and be inspired by its evolution! Take a stroll with Michael through 20 acres of mature fruit and nut orchards and learn the essentials of growing fruit and nut trees.

Geared to a national audience, each video covers 60+ minutes of varietal information, organic practices, and growing tips that will help you learn from our successes and failures!

DVD: $15.00 each or **Set for $25**

$4.00 shipping if ordered separately, *or follow normal shipping chart to ship with plants*

BOOKS & VIDEO

This is a partial listing. Please visit our website for all available titles.

Acorns and Eat-em by Sue Ellen Ocean - Oaks are native to nearly all states, and many species have traditionally been used as human food. This book has simple modern techniques for removing the bitterness in acorns, with lots of delicious recipes.
$17.75 + $4.95 shipping/book

Apples of North America by Tom Burford - There is a vast world of varieties that goes beyond the common grocery store offerings of Red Delicious and Granny Smith. With names like American Beauty, Carter's Blue, and Fallawater, and flavors ranging from sweet to tart, this treasure trove of unique apples is ripe for discovery.
$19.95 + $5.95 shipping/book

The Bench Grafter's Handbook: Principles and Practice by Brain E Humphrey - the most comprehensive reference and instructional manual for all aspects of plant grafting. Covers over 2000 species and cultivars of important ornamental, fruit and nut plants. Over 500 color photos and illustrations in 635 pages. **$115.00 + $5.95 shipping/book**

The Big Book of Cider Making by Chris and Kirsten Shockey - With expert advice and clear, step -by-step instructions, The Big Book of Cidermaking equips readers with the skills they need to make the cider they want: sweet, dry, fruity, farmhouse-style, hopped, barrel-aged, or fortified. 2020. 336 pages. Full color illustrations.

Covers botany, history, organic pest and disease control, with harvesting, marketing, processing, recipes and comprehensive cultivar descriptions. A great resource for backyard and commercial growers. Well-illustrated.
$29.99 + $5.95 shipping/book

TERMS AND CONDITIONS

*See **page 40** for shipping rates and mail order form*

We ship nursery stock within the United States only.

Orders are filled on a first-come, first-served basis. We accept orders throughout the year, but will hold your order until the nursery stock is available and it is safe to ship to your area.

We cannot guarantee the contents of an order until it is packed. Sometimes we have inventory loss from wildlife or weather.

If you supply us with an email address when placing an order you will receive **a confirmation with the approximate shipping month.** Once the order is shipped you will also receive an email confirmation and tracking number.

If you have any problems with your order, please contact us at **360-985-2873.** 8am-5pm Pacific time, Monday - Friday

Payments

We accept personal checks, Visa, MasterCard, American Express, Discover and PayPal. Credit cards will normally be charged when we begin shipping orders to your location. From April 1st to August 31st, customers will be charged the full amount of their order upon order placement.

Prices and Availability

Prices and availability are subject to change without notice. Shipping charges and sales tax are subject to change without notice. Shipping charges will be evaluated and may be adjusted when UPS and USPS release their new rates for the coming year. This typically occurs in December and January. Order adjustments are made if necessary.

Size and rootstock changes may be made if necessary unless "No Substitutions" has been requested.

Cancellation of Orders

Orders that are less than $500.00 can be cancelled without penalty **until the order is pulled.** If an order is cancelled after the order is pulled, A restocking fee of $25.00 or a 50% will be assessed **whichever is greater**.

Deposits on Large Orders

On orders of **$500.00 or more** we require a **25% non-refundable deposit** due when the order is placed.

Depotting Plants Before Shipment

During the bareroot season some plants may be depotted from their containers to ease the shipping process. **This will be at the discretion of Burnt Ridge Nursery staff.**

Guarantee Policy

For orders shipped in the winter or spring:

Our bareroot trees are guaranteed to leaf out and grow if correctly cared for upon receipt, and properly planted and maintained. We guarantee evergreen plants will be delivered in a healthy condition.

Because the trees are living things and subject to the whims of nature and neglect, we do not guarantee against late frost damage, herbicide damage, mower or wildlife damage, drought or excessive fertilizer, etc. Jujubes, mulberries, persimmons, peaches nectarines and dogwoods can sometimes delay breaking dormancy until mid summer. Trees that have been stored in our coolers can also be late to leaf out.

If there is a problem with an evergreen tree, please contact us within **3 days** of receipt.

Before contacting us about a bareroot tree, scrape the bark of the tree down low on the trunk with a fingernail or knife. If you see some green tissue just under the bark, the plant is still alive. Be patient, the tree should leaf out. Please contact us **ASAP** if plants fail to leaf out and you've already scraped the bark to examine the cambial tissue. To be eligible for the bareroot guarantee, you must contact us within **3 months** for orders delivered or picked up in **January or February**; **2 months** for orders delivered or picked up in **March-May**; and **1 month** for orders delivered or picked up in **June**.

We do not guarantee orders shipped in the summer or fall.

Plant orders are only guaranteed if shipped during safe transit times below.

Safe Shipping Times

The following are approximate beginning safe shipping times for each state. **Actual shipping times are subject to change due to weather and the discretion of nursery staff.**

January: Western WA, Western OR, CA, HI

Mid-February to Early March: AL, Southern AZ, FL, GA, LA, MS, Southern NM, TX

Mid-March: Northern AZ, AR, DC, KS, KY, MD, MO, NV, Northern NM, NC, OK, SC,TN, UT, VA, WV

Early to Mid-April: CO, CT, DE, ID, IL, IN, IA, MA, ME, MT, NE, NH, NJ, NY, OH, Eastern OR, PA, RI, SD, VT, Eastern WA, WY
