Late	English Morello (P. cerasus)																								O

O = Self fertile/Universal Pollinator if blooming at same time

+ = Successful cross pollination

Pie cherries will partially pollinate sweet cherries, but it isn't recommended because the sweet cherry production will be low.

**Cherry pollination can be complex**

Although Stella is considered a Universal Pollinator, it does not pollinate well with Bing - too genetically similar. Also, Bing/Lambert/Royal Ann/Kristin cannot cross-pollinate for same reasons.

\*\* Blooming time can vary greatly by geographical location and weather conditions; ranges listed are estimates based on best available data as of 2019.
